Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

January, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of January 1939 the births (corrected for transfer to place of usual residence) of 3,927 living children, of whom 2,055 were males and 1,872 were females. Compared with the number in the previous month the total births were 138 more, male births being 120 more and female births 18 more. The monthly birth-rate (living children only) in these towns taken collectively was 18.0 per thousand. This rate is 0.6 more than that for the previous month but is 0.7 below the five years' average. The births of 158 still-born children were registered in these towns during the month in accordance with the provisions of the Registration of Still-births (Scotland) Act, 1938, which came into operation on 1st January 1939.

In the individual towns the monthly birth-rate ranged from 21.8 in Motherwell and Wishaw, 21.3 in Coatbridge and 20.5 in Greenock, to 15.6 in Edinburgh and in Falkirk, 14.3 in Ayr and 14.2 in Kirkcaldy. In Hamilton the rate was 19.7, in Glasgow 19.5, in Clydebank 18.6, in Paisley 18.0, in Dunfermline 17.4, in Kilmarnock 16.6, in Perth 16.5, in Dundee 16.0 and in Aberdeen 15.7.

Of the 3,927 living children whose births were registered during the month, 3,708 or 94.4 per cent. were legitimate, while 219 or 5.6 per cent. were illegitimate. The legitimate children numbered 125 more than in the previous month and the illegitimate children 13 more. The illegitimate percentage for the month is 0.2 above that for the previous month. In the individual towns it ranged from 9.8 in Perth, 9.1 in Hamilton and 7.8 in Falkirk, to 3.5 in Kilmarnock, 2.9 in Paisley and 1.8 in Kirkcaldy. In Glasgow the rate was 5.1 and in Edinburgh 6.4.

Marriages.—Marriages registered during the month numbered 2,214 and are 38 fewer than in the previous month. The marriage-rate, 10.1 per thousand, is 0.3 below that for the previous month but 0.1 above the average. In the individual towns it ranged from 15.5 in Dunfermline, 14.4 in Kirkcaldy and 13.5 in Falkirk, to 7.8 in Motherwell and Wishaw, 6.0 in Ayr and 5.0 in Greenock.

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

In Glasgow the rate was 11.4 and in Edinburgh 9.5. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 3,979, of which 1,980 were of males and 1,999 were of females. This number is 724 more than in the previous month, males being 342 more and females 382 more.

The monthly death-rate in these towns taken collectively was 18.2 per thousand, being 3.2 above that for the previous month and 0.9 above the average. In the towns taken individually the death-rate ranged from 21.1 in Paisley, 20.2 in Glasgow and in Falkirk and 19.9 in Greenock, to 14.6 in Ayr, 14.2 in Clydebank and 12.3 in Aberdeen and in Dunfermline. In Motherwell and Wishaw the rate was 18.7, in Perth 18.4, in Coatbridge 18.2, in Kilmarnock 17.8, in Hamilton 17.6, in Dundee 16.8, in Edinburgh 16.5 and in Kirkcaldy 15.2.

Deaths of children aged less than one year numbered 396 and equalled an infantile mortality rate of 99 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 35 more than in the previous month, while the rate is 9 more than in that month but 9 below the average. In the individual towns this rate ranged from 193 in Falkirk, 191 in Perth and 182 in Kilmarnock, to 68 in Dundee and in Kirkcaldy, 64 in Edinburgh and 18 in Ayr. In Coatbridge the rate was 161, in Paisley 153, in Motherwell and Wishaw 125, in Clydebank 108, in Hamilton 107, in Dunfermline 106, in Glasgow 105, in Greenock 99 and in Aberdeen 70.

Causes of Death.—Deaths from the principal epidemic diseases numbered 300 and equalled a death-rate of 1.4 per thousand. These deaths are 190 more than in the previous month and the rate is 0.9 more. They include none from typhoid fever, none from measles, 5 from scarlet fever, 64 from whooping-cough, 26 from diphtheria, 183 from influenza, 6 from cerebro-spinal fever, and 16 from other epidemic diseases, 7 of which were ascribed to lethargic encephalitis, 4 to dysentery, 4 to erysipelas and 1 to acute poliomyelitis. Compared with the number in the previous month deaths from scarlet fever are the same, from whooping-cough 33 more, from diphtheria 5 fewer, from influenza 152 more, from cerebro-spinal fever the same and from other epidemic diseases 10 more.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 859 and equalled a death-rate of 3.9 per thousand. Compared with the number in the previous month these deaths are 347 more, while the rate is 1.5 more and is 0.3 above the average.

Deaths from all forms of tuberculosis numbered 215, of which 173 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 38 more and those from respiratory tuberculosis 28 more. Compared with the average the former are the same and the latter 1 more.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

JANUARY 1939.

Mean barometric pressure, 29.593 inches; less than the average* by 0.304 in.

Mean temperature, 37.1° F.; less by 2.1° F.

Mean daily range of temperature, 9.0° F.; greater by 0.1° F.

Mean daily sunshine, 1.36 hour; greater by 0.03 hour.

Rain, depth in inches, 3.82; greater by 0.84 inch.

Wind, direction of: a 7 days' excess of winds between north-west and north-east.

A continual succession of depressions passing across the British Isles maintained unsettled weather throughout the greater part of the month. Rainfall

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

over Scotland was remarkable for its persistency rather than its intensity, the only relatively dry spells being from the 2nd to the 5th and from the 27th to the end of the month. The earlier dry spell was characterised by extreme cold, especially at inland stations. The most stormy weather occurred on the 15th and 16th, when an intense depression to the west of Scotland moved slowly north-east. Gales occurred in all districts and wind gusts up to 70 miles per hour were registered at the Bell Rock and up to 63 miles per hour at Kirkwall. Conditions were even more severe to the south-west and south of these islands and especially in the English Channel. Scotland escaped the great gales of the 22nd and 23rd which caused much damage to shipping in the south. The extremes of pressure in Edinburgh were 30.31 inches on the 29th and 28.63 inches on the 15th.

Intensely cold weather was experienced over the whole of Scotland during the first week. At some inland places the minima exceeded the remarkably low values registered in December. Extreme values reported were 1° F. (31 degrees of frost) at Braemar and Dalwhinnie on the 4th, 6° F. at Logie Coldstone on the 6th, 7° F. at Balmoral on the 4th and 6th and also at West Linton on the 6th. There was a sharp rise in temperature in all districts on the 7th, on which day most stations recorded the highest temperature of the month; 55° F. was reported from Onich and 54° F. from Ayr and Colmonell, while many other stations in the south and west counties had maxima of 50° F. or slightly above. Ground frosts occurred on every day except the 9th and 20th and were particularly severe in the first week. Thermometers exposed on the ground registered -2° F. (34 degrees of frost) at Braemar on the 4th and at Dalwhinnie on the 6th.

In western and northern districts sunshine was abundant; at Stornoway, Onich and Oban the aggregates were more than double the normal. In the east of the country there was a deficiency of sunshine. The largest aggregates reported were 68 hours at Tiree, 67 hours at Oban, 65 hours at Turnberry and 63 hours at Troon and Prestwick. Less than 30 hours' sunshine were registered at some inland stations and in the extreme north. The smallest aggregates were 20 hours at Peebles and 14 hours at Fort Augustus.

Rainfall exceeded the normal in the east and north of Scotland and also south of a line drawn from Dundee to Renfrew. The areas of greatest excess were along the Firth of Tay and in the extreme south-east, where appreciably more than double the normal rainfall was recorded. Totals were deficient in the west and some places in Argyll received only about half their normal rainfall. The wettest day was the 14th, when daily amounts exceeding an inch were measured in nearly all districts. The largest falls reported on this day were 2.55 inches at Lochgoilhead, 2.45 inches at Ardarroch near Garelochhead and 2.41 inches at West Kilbride. Other outstanding daily falls were 1.80 inch at Fort William and 1.50 inch at Kinlochquoich on the 7th, 1.60 inch at Canonbie and 1.58 inch at Fort William on the 8th, and 1.80 inch at Balerno on the 18th.

Hail was reported locally on 23 days. It was fairly widespread on the 24th.

Snow fell frequently throughout the month in all districts. The falls on the 1st and from the 24th to 28th were widespread. At Braemar there was 6 to 8 inches undrifted snow in the first week and again about 8 inches on the 28th and 29th. Snow or sleet fell in one place or other on 25 days in the month.

Fog occurred locally on 22 days. It was most prevalent at Greenock, where it was reported on 16 days.

Gales were reported on 16 days. The most severe was on the 15th, when the wind attained a mean speed of 50 miles per hour between 11 p.m. and midnight at the Bell Rock.

Thunderstorms occurred in Edinburgh and some east coast towns on the night of the 25th. Thunder was also reported at Kirkwall on the 8th and at Stornoway on the 8th and 9th.

Aurora was observed in Orkney or Shetland on 13 nights. Only one other report was received—from Aberdeen on the 13th.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 8.

Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

February, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of February 1939 the births (corrected for transfer to place of usual residence) of 3,436 living children, of whom 1,792 were males and 1,644 were females. Compared with the number in the previous month the total births were 491 fewer, male births being 263 fewer and female births 228 fewer. The monthly birth-rate (living children only) in these towns taken collectively was 17.4 per thousand. It is the lowest rate recorded in these reports for the month of February. This rate is 0.6 less than that for the previous month and is 1.3 below the five years' average. The births of 159 still-born children were registered in these towns during the month, and correspond to a rate of 44 per thousand total births registered (including still-born).

In the individual towns the monthly birth-rate ranged from 22.8 in Coatbridge, 21.8 in Hamilton and 21.1 in Greenock, to 13.2 in Edinburgh, 12.9 in Dunfermline and 12.7 in Ayr. In Motherwell and Wishaw the rate was 19.4, in Paisley 19.3, in Glasgow 19.0, in Falkirk 18.7, in Aberdeen 18.3, in Kilmarnock 17.4, in Perth 16.1, in Clydebank 16.0, in Kirkcaldy 15.4 and in Dundee 14.2.

Of the 3,436 living children whose births were registered during the month, 3,244 or 94.4 per cent. were legitimate, while 192 or 5.6 per cent., were illegitimate. The legitimate children numbered 464 fewer than in the previous month and the illegitimate children 27 fewer. The illegitimate percentage for the month is the same as that for the previous month. In the individual towns it ranged from 8.1 in Dunfermline, 6.7 in Glasgow and 6.0 in Edinburgh, to 2.2 in Perth, 1.5 in Hamilton and 0 in Coatbridge and in Kilmarnock.

Marriages.—Marriages registered during the month numbered 1,320 and are 894 fewer than in the previous month. The marriage-rate, 6.7 per thousand, is 3.4 below that for the previous month but 0.5 above the average. It is the highest rate recorded for the month of February since 1923, when it was 7.1. In the individual towns it ranged from 8.6 in Hamilton, 8.0 in Kirkcaldy and 7.8 in Aberdeen, to 4.3 in Clydebank and in Coatbridge and 4.2 in Greenock.

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

In Glasgow the rate was 7.3 and in Edinburgh 6.6. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 3,052, of which 1,498 were of males and 1,554 were of females. This number is 927 fewer than in the previous month, males being 482 fewer and females 445 fewer.

The monthly death-rate in these towns taken collectively was 15.4 per thousand, being 2.8 below that for the previous month and 0.3 below the average. In the towns taken individually the death-rate ranged from 17.7 in Kirkcaldy, 17.2 in Perth and 16.5 in Edinburgh and in Kilmarnock, to 13.5 in Hamilton, 12.7 in Paisley and 9.5 in Falkirk. In Aberdeen and in Dunfermline the rate was 16.4, in Glasgow and in Clydebank 15.5, in Coatbridge 15.3, in Motherwell and Wishaw 15.2, in Greenock 14.7, in Dundee 13.7 and in Ayr 13.6.

Deaths of children aged less than one year numbered 353 and equalled an infantile mortality rate of 98 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 43 fewer than in the previous month, while the rate is 1 less than in that month and 8 below the average. In the individual towns this rate ranged from 143 in Ayr, 140 in Motherwell and Wishaw and 133 in Coatbridge and in Kilmarnock, to 58 in Falkirk, 57 in Kirkcaldy and 23 in Perth. In Greenock the rate was 125, in Hamilton and in Dunfermline 119, in Glasgow 106, in Paisley 99, in Aberdeen and in Clydebank 90, in Edinburgh 75 and in Dundee 69.

Causes of Death.—Deaths from the principal epidemic diseases numbered 240 and equalled a death-rate of 1.2 per thousand. These deaths are 60 fewer than in the previous month and the rate is 0.2 less. They include none from typhoid fever, none from measles, 3 from scarlet fever, 50 from whooping-cough, 23 from diphtheria, 147 from influenza, 8 from cerebro-spinal fever, and 9 from other epidemic diseases, 6 of which were ascribed to erysipelas, 2 to lethargic encephalitis and 1 to dysentery. Compared with the number in the previous month deaths from scarlet fever are 2 fewer, from whooping-cough 14 fewer, from diphtheria 3 fewer, from influenza 36 fewer, from cerebro-spinal fever 2 more and from other epidemic diseases 7 fewer.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 443 and equalled a death-rate of 2.2 per thousand. Compared with the number in the previous month these deaths are 416 fewer, while the rate is 1.7 less and is 0.6 below the average.

Deaths from all forms of tuberculosis numbered 192, of which 152 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 23 fewer and those from respiratory tuberculosis 21 fewer. Compared with the average the former are 9 fewer and the latter 6 fewer.

METEOROLOGICAL NOTES

supplied by the Meteorological Office, Edinburgh.

FEBRUARY 1939.

Mean barometric pressure, 29.820 inches; less than the average* by 0.052 in.

Mean temperature, 42.3° F.; greater by 3.0° F.

Mean daily range of temperature, 9.4° F.; less by 0.1° F.

Mean daily sunshine, 1.79 hour; less by 0.27 hour.

Rain, depth in inches, 3.90; greater by 1.39 inch.

Wind, direction of: an 8 days' excess of south or south-west winds.

Unsettled and rather mild weather with frequent, and sometimes heavy, precipitation was experienced over Scotland generally throughout the month. An intense depression west of Ireland moved north-eastwards on the 6th and southerly gales occurred in many districts. In Edinburgh the wind attained a

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

mean speed of 51 miles per hour between 11 p.m. and midnight on the 6th with gusts up to 81 miles per hour. In the succeeding week pressure was high to the south and low to the north of the British Isles and dull rainy weather prevailed in all parts of Scotland. Conditions were unusually severe on the 15th and 16th, especially in northern districts which came under the influence of depressions moving east in the latitude of Iceland. Wind gusts up to 80 miles per hour were registered at Stornoway, 75 miles per hour at Kirkwall and 70 miles per hour at Tiree. A belt of high pressure extending from the Azores across England to north-west Russia brought fairer weather on the 19th and 20th. Subsequently troughs of low pressure, associated with Atlantic depressions, caused a renewal of overcast skies with rain in all districts. The extremes of pressure in Edinburgh were 30.41 inches on the 13th and 28.90 inches on the 23rd.

Mean temperatures were appreciably above normal everywhere. The excess over the normal varied from rather more than 2° F. in the south-west to about 4° F. in the north-east. The warmest day was the 10th, when a shade temperature of 62° F. was registered at Aberdeen, this being 5 degrees above the highest previously recorded there in early February. Other high maxima were 61° F. at Craibstone and 60° F. at Crieff, Gordon Castle, Forres and Lossiemouth, all on the 10th. The coldest spell was at the beginning of the month and the extreme minima reported on the 2nd were 9° F. at Braemar, 14° F. at West Linton and 15° F. at Dalwhinnie, Forres and Balmoral. Ground frosts were registered on 20 days. They occurred in all districts on the first three and the last three days of the month. The lowest ground temperatures reported were 8° F. at Braemar, 9° F. at Dalwhinnie, 11° F. at Balmoral and West Linton, all on the 2nd.

Sunshine was deficient over the greater part of the country, but aggregates slightly in excess of the normal were reported from stations in Shetland and Banffshire. The highest aggregates were 81 hours at Forres, 78 hours at Gordon Castle, 76 hours at Craibstone and 75 hours at Lossiemouth. The lack of bright sunshine was most marked in the west. Fort Augustus had only 19 hours, or 30 hours less than the normal, and Fort William had only 20 hours.

The 1st and 2nd were dry days over most of Scotland but were followed by a remarkable succession of rain days. Some stations in the north and west had rain on every day from the 3rd to 28th inclusive. Totals for the month were slightly below normal in the Moray Firth area and in the south-eastern counties but elsewhere exceeded the normal. The greatest excess occurred in western districts, where some stations registered double the normal amount. Daily falls exceeding one inch were numerous and occurred in all districts. At Kinlochquoich there were no less than 10 such occasions, including three in succession, the 9th, 10th and 11th, when the measurements were 2.85, 5.05 and 1.95 inches respectively. Other outstanding daily falls were 2.29 inches at Lochwinnoch (Renfrewshire) on the 6th, 2.14 inches at Ardgour on the 9th, 2.34 inches at Fort William on the 10th, 2.37 inches at North Ballachulish and 2.23 inches at Kingairloch on the 20th, and 2.37 inches at Balnaboth (Glen Prosen) and 2.15 inches at Glenbranter on the 21st.

Hail was reported at many widely separated stations in the west on the 16th and 22nd and locally on 13 other days.

Snow lay on the hills throughout the month. On lower ground the falls though frequent were not heavy. It was reported at one place or other on 16 days.

There was very little fog but it occurred locally on 9 days.

Gales were reported on every day except the 1st, 2nd, 17th and 28th. They were most frequent, and at times severe, in the north and west. Lerwick experienced winds of gale force on 18 days.

Thunderstorms occurred on 6 days. They were widespread on the 26th.

Aurora was seen on 14 nights, but conditions in Scotland were mostly unfavourable for observation. A fine display on the 6th was seen as far south as Peterborough and South Petherton (Somerset). On the 24th some beautiful effects were observed at many places in England and Wales.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 16.

OF THE REGISTRAR-GENERAL

Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

March, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of March 1939 the births (corrected for transfer to place of usual residence) of 4,047 living children, of whom 2,116 were males and 1,931 were females. Compared with the number in the previous month the total births were 611 more, male births being 324 more and female births 287 more. The monthly birth-rate (living children only) in these towns taken collectively was 18.5 per thousand. This rate is 1.1 more than that for the previous month but is 0.6 below the five years' average. The births of 180 still-born children were registered in these towns during the month, and correspond to a rate of 43 per thousand total births registered (including still-born).

In the individual towns the monthly birth-rate ranged from 26.3 in Hamilton, 22.1 in Coatbridge and 20.3 in Glasgow, to 15.8 in Edinburgh, 14.6 in Dundee and 12.6 in Dunfermline. In Motherwell and Wishaw the rate was 19.8, in Greenock 19.3, in Paisley 19.0, in Falkirk and in Perth 18.4, in Ayr 17.8, in Clydebank 17.2, in Aberdeen 17.1, in Kirkcaldy 17.0 and in Kilmarnock 16.6.

Of the 4,047 living children whose births were registered during the month, 3,836 or 94.8 per cent. were legitimate, while 211 or 5.2 per cent. were illegitimate. The legitimate children numbered 592 more than in the previous month and the illegitimate children 19 more. The illegitimate percentage for the month is 0.4 below that for the previous month. In the individual towns it ranged from 7.5 in Dunfermline, 7.0 in Motherwell and Wishaw and 6.8 in Hamilton, to 3.3 in Falkirk, 3.0 in Kirkcaldy and 1.6 in Ayr. In Glasgow the rate was 5.2 and in Edinburgh 5.5.

Marriages.—Marriages registered during the month numbered 1,126 and are 194 fewer than in the previous month. The marriage-rate, 5.1 per thousand, is 1.6 below that for the previous month and 1.0 below the average. In the individual towns it ranged from 6.2 in Kirkcaldy, 5.9 in Edinburgh and 5.8 in Kilmarnock and in Perth, to 2.9 in Motherwell and Wishaw, 2.6 in Coatbridge and 2.2 in Clydebank. In Glasgow the rate was 5.4. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,893, of which 1,485 were of males and 1,408 were of females. This number is 159 fewer than in the previous month, males being 13 fewer and females 146 fewer.

The monthly death-rate in these towns taken collectively was 13.2 per thousand, being 2.2 below that for the previous month and 2.2 below the average. It is the lowest death-rate recorded for March in these returns. The previous lowest was 13.8 in March 1933. In the towns taken individually the death-rate ranged from 15.5 in Kirkcaldy, 15.1 in Coatbridge and 14.9 in Kilmarnock, to 11.6 in Paisley, 10.3 in Ayr and 9.8 in Clydebank. In Dunfermline the rate was 14.5, in Falkirk 14.4, in Greenock 14.3, in Hamilton 14.0, in Glasgow 13.4, in Edinburgh 13.3, in Motherwell and Wishaw 13.0, in Perth 12.9, in Dundee 12.8 and in Aberdeen 12.5.

Deaths of children aged less than one year numbered 300 and equalled an infantile mortality rate of 76 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. This is the lowest infantile mortality rate ever recorded for March in this series of returns. The previous lowest occurred in March of last year, when it was 88. These deaths are 53 fewer than in the previous month, while the rate is 22 less than in that month and 30 below the average. In the individual towns this rate ranged from 160 in Hamilton, 89 in Dunfermline and 88 in Coatbridge, to 51 in Kirkcaldy, 47 in Aberdeen and 41 in Clydebank. In Paisley the rate was 83, in Glasgow 82, in Edinburgh 76, in Motherwell and Wishaw 73, in Greenock 71, in Falkirk 70, in Kilmarnock 62, in Perth 60, in Dundee 56 and in Ayr 55.

Causes of Death.—Deaths from the principal epidemic diseases numbered 124 and equalled a death-rate of 0.6 per thousand. These deaths are 116 fewer than in the previous month and the rate is 0.6 less. They include 1 from typhoid fever, none from measles, 1 from scarlet fever, 45 from whooping-cough, 28 from diphtheria, 36 from influenza, 3 from cerebro-spinal fever, and 10 from other epidemic diseases, 3 of which were ascribed to dysentery, 3 to erysipelas and 4 to lethargic encephalitis. Compared with the number in the previous month deaths from typhoid fever are 1 more, from scarlet fever 2 fewer, from whooping-cough 5 fewer, from diphtheria 5 more, from influenza 111 fewer, from cerebro-spinal fever 5 fewer and from other epidemic diseases 1 more.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 308 and equalled a death-rate of 1.4 per thousand. It is the lowest death-rate from respiratory diseases on record for March in this series of returns. The previous lowest was 2.0 in March 1938. Compared with the number in the previous month these deaths are 135 fewer, while the rate is 0.8 less and is 1.3 below the average.

Deaths from all forms of tuberculosis numbered 229, of which 193 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 37 more and those from respiratory tuberculosis 41 more. Compared with the average the former are 18 more and the latter 31 more.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

MARCH 1939.

Mean barometric pressure, 29.971 ins.; greater than the average* by 0.141 in.

Mean temperature, 42.5° F.; greater by 1.6° F.

Mean daily range of temperature, 11.9° F.; greater by 0.6° F.

Mean daily sunshine, 3.67 hours; greater by 0.31 hour.

Rain, depth in inches, 2.76; greater by 0.04 inch.

Wind, direction of: a two days' excess of north or north-east winds.

Rather unsettled and mild weather prevailed during the first few days of the month and frequent rain or drizzle alternated with some bright sunny periods.

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

On the 7th an anticyclone became centred to the south-west of Ireland and remained in that position almost continuously until the 20th. During that period a series of secondary depressions moved south-eastwards across Scotland to the North Sea, and associated short bursts of polar air caused noticeable temperature variations in eastern districts. A deep depression south-west of Iceland which moved east-south-east to Scandinavia on the 20th caused severe gales in the extreme north-west and wind gusts up to 73 miles per hour were registered at Stornoway. From the 24th to the 26th a spell of fair weather was associated with an anticyclone to the northward of the British Isles. Some good sunshine records were registered especially in western districts, Stornoway and Tiree both having daily amounts exceeding 10 hours. Apart from some scattered showers mainly fair conditions continued in the west, but dull, rather wet and cold weather marked the closing days of the month in eastern districts. The extremes of pressure in Edinburgh were 30.62 inches on the 12th and 29.23 inches on the 22nd.

Mean temperatures were slightly above normal in most places, but in the Clyde area and in parts of Perthshire the excess amounted to rather more than 2° F. The warmest day was the 13th, when shade temperature rose to 62° F. at Stonehaven, 61° F. at Lundin Links and 60° F. at Montrose. Cold spells occurred on the 9th-10th and from the 24th to 26th. The lowest temperatures reported were 20° F. at Braemar on the 24th, 21° F. at Dalwhinnie on the 9th, 23° F. at Balmoral on the 10th and at Wolfelee on the 24th. Ground frosts were registered locally on every day except from 3rd to 6th and from 14th to 16th. Dalwhinnie had the lowest readings, viz. 13° F. on the 24th and 15° F. on the 9th, 12th and 26th; other low ground minima were 17° F. at Braemar, 18° F. at Edinburgh and 19° F. at Carlake, all on the 24th.

Sunshine was below normal in east Scotland and abundant in the west. In the Clyde area the excess over the normal amounted to more than 20 hours. The highest aggregates were 128 hours at Troon, 124 hours at Carlake and Nairn and 123 hours at Dumfries and Stornoway. Less than 100 hours' sunshine were registered in the extreme north and in Aberdeenshire, and only 85 hours at Eskdalemuir and 78 hours at Strathy (Sutherland).

Over the southern half of Scotland the rainfall of the month was above average, but only at a few isolated stations did this excess amount to as much as 50 per cent. of the normal fall. In central and western districts totals were slightly less than average. Precipitation was frequent throughout the month, many stations having measurable rain on 28 of the 31 days. Daily falls exceeding an inch were fairly numerous, especially during the first week. The largest daily fall reported was 2.58 inches at Shiel near Carsphairn (Kirkcudbright) on the 7th; 1.65 inch fell at Glenlee (Kirkcudbright) and 1.60 inch at Saddell Manse (Kintyre) on this day. Other heavy daily falls were 1.50 inch at Shiel on the 1st, 1.98 inch at Kinlochquoich and 1.84 inch at North Ballachulish on the 2nd, 1.51 inch at Kinlochquoich on the 21st and 1.22 inch at West Hopes (East Lothian) on the 27th.

Snow fell in all districts from the 6th to the 8th and from 20th to 22nd and locally on 14 other days, but the falls were nowhere very heavy.

Hail was reported on 16 days. The most widespread falls were on the 6th and 7th in the west and from the 22nd to the 27th in all districts.

Fog occurred at one place or other on 12 days. On the 10th it was reported over practically the whole of the southern counties.

Gales were reported locally on 13 days. Those on the 2nd, 3rd, 6th and 20th were fairly widespread though not of unusual severity.

Thunderstorms occurred from the 5th to the 8th and on the 24th. On the 7th storms were reported from all parts of west Scotland. At Ullapool the storm was described as of exceptional severity and at Millport (Bute) as the worst experienced for many years. Several buildings in Millport were struck by lightning and hailstones measured half an inch in diameter.

Aurora was observed at some northern stations on 14 nights. It was seen as far south as Eskdalemuir on the 23rd.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 24.

Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

April, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of April 1939 the births (corrected for transfer to place of usual residence) of 3,927 living children, of whom 2,016 were males and 1,911 were females, and of 172 still-born children. Compared with the number in the previous month live births were 120 fewer, male births being 100 fewer and female births 20 fewer. The monthly birth-rate (living children only) in these towns taken collectively was 18.6 per thousand. It is the lowest rate recorded in these reports for the month of April in any year. This rate is 0.1 more than that for the previous month but is 1.8 below the five years' average. The births of still-born children correspond to a rate of 42 per thousand total births registered (including still-born) as compared with 43 in the previous month.

In the individual towns the monthly birth-rate ranged from 24.7 in Coatbridge, 22.1 in Greenock and 21.5 in Paisley, to 16.3 in Kirkcaldy, 14.3 in Falkirk and 13.8 in Aberdeen. In Kilmarnock the rate was 21.4, in Hamilton 21.3, in Glasgow 19.6, in Ayr 19.5, in Dunfermline 18.9, in Clydebank 18.8, in Motherwell and Wishaw 18.4, in Perth 17.7, in Edinburgh 16.8 and in Dundee 16.5.

Of the 3,927 living children whose births were registered during the month, 3,723 or 94.8 per cent. were legitimate, while 204 or 5.2 per cent. were illegitimate. The legitimate children numbered 113 fewer than in the previous month and the illegitimate children 7 fewer. The illegitimate percentage for the month is the same as that for the previous month. In the individual towns it ranged from 10.3 in Dunfermline, 9.4 in Aberdeen and 7.6 in Ayr, to 2.7 in Greenock and in Clydebank, 1.9 in Perth and 0 in Kirkcaldy. In Glasgow the rate was 5.1 and in Edinburgh 5.7.

Marriages.—Marriages registered during the month numbered 2,283 and are 1,157 more than in the previous month. The marriage-rate, 10.8 per thousand, is 5.7 above that for the previous month and 0.8 above the average. In the individual towns it ranged from 13.3 in Kilmarnock, 12.6 in Paisley and 12.0 in Kirkcaldy, to 8.2 in Greenock, 8.1 in Coatbridge and 6.8 in Falkirk. In Glasgow

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

the rate was 11.7 and in Edinburgh 10.7. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,721, of which 1,367 were of males and 1,354 were of females. This number is 172 fewer than in the previous month, males being 118 fewer and females 54 fewer.

The monthly death-rate in these towns taken collectively was 12.9 per thousand, being 0.3 below that for the previous month and 1.4 below the average. In the towns taken individually the death-rate ranged from 16.5 in Clydebank, 14.7 in Perth and 14.0 in Dunfermline, to 11.8 in Greenock, 11.3 in Motherwell and Wishaw and 9.8 in Falkirk. In Hamilton the rate was 13.9, in Coatbridge 13.7, in Kirkcaldy 13.3, in Edinburgh 13.1, in Glasgow 12.8, in Kilmarnock 12.7, in Dundee and in Paisley 12.6, in Aberdeen 12.5 and in Ayr 12.1.

Deaths of children aged less than one year numbered 285 and equalled an infantile mortality rate of 75 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. It is the lowest rate recorded in these reports for the month of April in any year. These deaths are 15 fewer than in the previous month, while the rate is 1 less than in that month and 22 below the average. In the individual towns this rate ranged from 125 in Hamilton, 111 in Kilmarnock and 100 in Paisley, to 56 in Coatbridge, 45 in Aberdeen and 38 in Falkirk. In Ayr the rate was 96, in Kirkcaldy 89, in Greenock 88, in Clydebank 86, in Glasgow 81, in Dunfermline 68, in Motherwell and Wishaw 66, in Edinburgh and in Perth 61 and in Dundee 58.

Causes of Death.—Deaths from the principal epidemic diseases numbered 74 and equalled a death-rate of 0.3 per thousand. These deaths are 50 fewer than in the previous month and the rate is 0.3 less. They include none from typhoid fever, 2 from measles, 1 from scarlet fever, 23 from whooping-cough, 21 from diphtheria, 19 from influenza, 1 from cerebro-spinal fever, and 7 from other epidemic diseases, 4 of which were ascribed to lethargic encephalitis, 2 to erysipelas and 1 to dysentery. Compared with the number in the previous month deaths from measles are 2 more, from scarlet fever the same, from whooping-cough 22 fewer, from diphtheria 7 fewer, from influenza 17 fewer, from cerebro-spinal fever 2 fewer and from other epidemic diseases 3 fewer. In the previous month 1 death was registered from typhoid fever.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 336 and equalled a death-rate of 1.6 per thousand. It is the lowest rate recorded in these reports for the month of April with the exception of that for April 1938, when it was also 1.6. Compared with the number in the previous month these deaths are 28 more, while the rate is 0.2 more but is 0.5 below the average.

Deaths from all forms of tuberculosis numbered 199, of which 157 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 30 fewer and those from respiratory tuberculosis 36 fewer. Compared with the average the former are 23 fewer and the latter 13 fewer.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

APRIL 1939.

Mean barometric pressure, 29.905 ins.; less than the average* by 0.014 in.

Mean temperature, 45.2° F.; greater by 0.7° F.

Mean daily range of temperature, 13.4° F.; less by 0.2° F.

Mean daily sunshine, 4.52 hours; less by 0.20 hour.

Rain, depth in inches, 1.76; less by 0.30 inch.

Wind, direction of: a four days' excess of winds between N.W. and N.E.

Unsettled conditions prevailed over most of Scotland at the beginning of

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

April, but in the extreme north the month opened fair with some good sunshine records. By the 7th anticyclonic conditions had become established over the country, resulting in a warm, sunny Easter. From the 13th to 17th conditions were again unsettled with gales in most districts. Another fine and relatively warm spell occurred during anti-cyclonic conditions from the 18th to 20th. A period of cool showery weather followed from the 21st to 27th. Towards the close of the month anticyclonic conditions again set in and the weather, though still rather cool for the time of year, was fine and sunny. The extremes of pressure in Edinburgh were 30.57 inches on the 18th and 29.29 inches on the 4th.

Mean temperatures were about equal to or slightly above normal. The greatest excess, rather more than a degree F., occurred in the counties of Renfrew and Ayr. The warmest day was the 11th, when shade temperatures rose to 72° F. at Ruthwell and to 70° F. at many other stations in the south-west. Cold spells occurred from the 5th to 7th and from the 27th to 30th. The lowest shade temperatures reported were 19° F. at Dalwhinnie and 20° F. at West Linton and Braemar on the 7th. The latter station also registered a minimum of 20° F. on the 30th. Ground frosts were registered in one place or other on every day except the 10th and from the 13th to 16th. Dalwhinnie recorded the lowest ground minima, viz. 8° F. on the 7th, 9° F. on the 30th and 10° F. on the 29th. The next lowest value reported was 11° F. at Balmoral on the 7th.

Sunshine aggregates were above normal at coastal stations but generally rather deficient inland. The greatest excess over the normal occurred in Shetland, where Lerwick had 164 hours' sunshine or 37 hours more than its normal. The largest aggregates were 179 hours at Dunbar, 174 hours at Stornoway, 173 hours at Turnberry and 170 hours at Arbroath. The smallest aggregates were 103 hours at Dalwhinnie and 106 hours at Fort Augustus and Benmore.

Rainfall totals were less than average over the greater part of Scotland, but equalled or slightly exceeded the average in the Clyde area and in parts of the Western Highlands. The largest deficiencies occurred along the east coast, where Aberdeen and Montrose had less than half the normal rainfall. Daily falls exceeding an inch were fairly numerous in western districts between the 13th and 16th and from the 21st to 23rd. Among the largest falls reported were 1.50 inch at Kinlochquioch on the 14th, 1.63 inch at Glenmoidart and 1.52 inch at Kinlochquioch on the 16th, 1.56 inch at Knoydart on the 21st, 1.66 inch in North Uist (Vallay) on the 22nd and 1.62 inch at Glenmoidart on the 23rd.

Snow was reported at one place or other on 16 days. On the 25th and 26th it fell generally in northern and central districts but did not lie to any appreciable depth.

Hail occurred on 16 days, the most widespread falls being on the 25th and 26th.

Fog, mostly of coastal type, occurred locally on 7 days.

Gales were reported on 10 days. Those of the 16th and 17th were the most severe, when gusts up to 60 miles per hour were registered at the Bell Rock and up to 65 miles per hour at Stornoway.

Thunder was reported locally on 7 days. The most disturbed period was from the 11th to 13th, when storms occurred generally over the southern counties.

Aurora was observed at northern stations on 14 nights. It was seen at Eskdalemuir on the 4th and 17th and at St. Abb's Head on the 17th and 24th.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 32.

Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

May, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of May 1939 the births (corrected for transfer to place of usual residence) of 4,465 living children, of whom 2,284 were males and 2,181 were females, and of 229 still-born children. Compared with the number in the previous month the living births were 538 more, male births being 268 more and female births 270 more. The monthly birth-rate (living children only) in these towns taken collectively was 20.4 per thousand. This rate is 1.8 more than that for the previous month and is 0.5 above the five years' average. The births of still-born children correspond to a rate of 49 per thousand total births registered (including still-born) as compared with 42 in the previous month.

In the individual towns the monthly birth-rate ranged from 25.7 in Hamilton, 24.3 in Dunfermline and 23.1 in Greenock, to 16.2 in Falkirk and in Perth and 14.9 in Kilmarnock. In Coatbridge it was 22.6, in Glasgow 22.0, in Clydebank 21.8, in Paisley 21.3, in Motherwell and Wishaw 20.6, in Kirkcaldy 19.1, in Aberdeen 19.0, in Edinburgh 17.9, in Dundee 17.8 and in Ayr 17.2.

Of the 4,465 living children whose births were registered during the month, 4,189 or 93.8 per cent. were legitimate, while 276 or 6.2 per cent. were illegitimate. The legitimate children numbered 466 more than in the previous month and the illegitimate children 72 more. The illegitimate percentage for the month is 1.0 above that for the previous month. In the individual towns it ranged from 12.0 in Perth, 8.1 in Hamilton and 7.9 in Clydebank, to 3.9 in Kilmarnock, 3.4 in Motherwell and Wishaw and 2.3 in Coatbridge. In Glasgow the rate was 6.3 and in Edinburgh 6.2.

Marriages.—Marriages registered during the month numbered 1,151 and are 1,132 fewer than in the previous month. The marriage-rate, 5.3 per thousand, is 5.5 below that for the previous month but 1.3 above the average. It is the highest marriage-rate recorded for the month of May since 1921. In the individual towns it ranged from 7.1 in Perth, 6.3 in Aberdeen and 6.2 in Glasgow,

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

to 2.5 in Clydebank and 2.2 in Paisley and in Greenock. In Edinburgh the rate was 5.2. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,875, of which 1,453 were of males and 1,422 were of females. This number is 154 more than in the previous month, males being 86 more and females 68 more.

The monthly death-rate in these towns taken collectively was 13.1 per thousand, being 0.2 above that for the previous month but 0.1 below the average. In the towns taken individually the death-rate ranged from 15.6 in Dundee and in Coatbridge and 15.2 in Ayr, to 11.6 in Kirkcaldy, in Hamilton and in Falkirk, 11.5 in Clydebank and 11.2 in Paisley. In Perth the rate was 14.9, in Kilmarnock 13.7, in Glasgow 13.3, in Edinburgh 13.1, in Motherwell and Wishaw 12.8, in Dunfermline 12.3, and in Aberdeen and in Greenock 11.7.

Deaths of children aged less than one year numbered 297 and equalled an infantile mortality rate of 75 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. It is the lowest rate recorded in these reports for the month of May in any year. These deaths are 12 more than in the previous month, while the rate is the same as in that month but 10 below the average. In the individual towns this rate ranged from 143 in Coatbridge, 140 in Perth and 111 in Ayr, to 54 in Edinburgh and in Clydebank and 26 in Hamilton. In Motherwell and Wishaw the rate was 100, in Paisley 89, in Dundee and in Kirkcaldy 85, in Glasgow 80, in Greenock 71, in Dunfermline 64, in Kilmarnock 63, and in Aberdeen and in Falkirk 56.

Causes of Death.—Deaths from the principal epidemic diseases numbered 76 and equalled a death-rate of 0.3 per thousand. These deaths are 2 more than in the previous month but the rate is the same. They include 1 from typhoid fever, 1 from measles, 2 from scarlet fever, 19 from whooping-cough, 32 from diphtheria, 9 from influenza, 2 from cerebro-spinal fever, and 10 from other epidemic diseases, 6 of which were ascribed to lethargic encephalitis, 2 to dysentery, 1 to erysipelas and 1 to acute poliomyelitis. Compared with the number in the previous month deaths from typhoid fever are 1 more, from measles 1 fewer, from scarlet fever 1 more, from whooping-cough 4 fewer, from diphtheria 11 more, from influenza 10 fewer, from cerebro-spinal fever 1 more and from other epidemic diseases 3 more.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 280 and equalled a death-rate of 1.3 per thousand. It is the lowest rate recorded in these reports for the month of May in any year. Compared with the number in the previous month these deaths are 56 fewer, while the rate is 0.3 less and is 0.4 below the average.

Deaths from all forms of tuberculosis numbered 215, of which 162 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 16 more and those from respiratory tuberculosis 5 more. Compared with the average the former are 8 more and the latter 4 more.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

MAY 1939.

Mean barometric pressure, 30.114 ins.; greater than the average* by 0.137 in.

Mean temperature, 51.7° F.; greater by 1.8° F.

Mean daily range of temperature, 15.3° F.; greater by 0.9° F.

Mean daily sunshine, 5.89 hours; greater by 0.24 hour.

Rain, depth in inches, 1.09; less by 1.19 inches.

Wind, direction of: a two days' excess of north-easterly winds.

An anticyclone lay to the north of Scotland at the beginning of the month

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

and the fine, sunny weather which was experienced in all districts except the extreme north was accompanied by cold northerly or north-easterly winds. On the 4th a depression covering the north-east Atlantic extended its influence over these islands and mainly showery but milder weather persisted for several days. Cool conditions returned on the 11th, when an anticyclone extending from north-west Ireland to Iceland caused another spell of northerly winds. During the succeeding week weather was fair over Scotland though temperatures were still rather low for the time of year. It was not until the 22nd that conditions became more seasonable. Apart from a temporary break on the 26th the weather was generally warm and sunny throughout the last week, the closing days in particular being especially brilliant, when daily amounts of sunshine reached 15 hours in several places. The extremes of pressure in Edinburgh were 30.54 inches on the 28th and 29.45 inches on the 5th.

Mainly as a result of the warm weather in the last ten days, mean temperatures for the month were above normal in all districts. The greatest excess, about 2.5° F., occurred at Fortrose and in Edinburgh. The warmest days were the 30th and 31st, when many stations recorded the highest shade temperatures for several years. Outstanding readings were 80° F. at Forres and 79° F. at Nairn on the 30th and 80° F. at Newton Stewart on the 31st. A day temperature of 72° F. at Dalwhinnie on the 30th was followed by a night minimum of 33° F. in the screen. During the cold spell in the first week some unusually low screen temperatures were registered. Extreme minima reported were 26° F. at Glenlee, 27° F. at Balmoral and Braemar and 28° F. at Kilmarnock, all on the 3rd. Ground frosts occurred at many places on the 3rd and 4th and locally, mostly at high level stations, on 19 other nights. Dalwhinnie reported a ground temperature of 20° F. on the 13th and 31st, Balmoral registered 20° F. on the 3rd, and Braemar and West Linton 21° F., also on the 3rd.

Sunshine aggregates exceeded the normal in most places, but there were considerable deficiencies in Orkney and Shetland and lesser deficiencies in the extreme north-west and at a few stations in east Scotland. Some remarkable aggregates were registered on the west coast. Turnberry and Oban headed the list with 231 and 222 hours, representing excesses over their normals of 33 and 42 hours respectively. Most stations in Ayrshire and Renfrewshire registered upwards of 200 hours sunshine. The smallest aggregates were 115 hours at Lerwick and 123 hours at Deerness (Orkney), both totals being 41 hours short of the normal.

The month was unusually dry over the whole of Scotland, the total rainfall in many places being less than an inch. Over most of the country precipitation was less than half the normal, but areas along the Moray Firth and in Dumfrieshire received less than a quarter of their normal rainfall. Though totals were small, most places had measurable rain on about 12 days and nowhere was an absolute drought recorded. The heaviest daily falls were 0.95 inch at Kingairloch and 0.87 inch at Dunlossit (Islay) on the 3rd; 1.31 inch at Gruline (Mull) on the 4th; 1.17 inch at Frandy and 1.10 at Backhill, both in Glendevon, on the 5th, and 0.97 inch at Kinlochquioch and 0.93 inch at Ardgour on the 26th.

Hail fell locally on 5 days.

Fog, generally of coastal type, occurred on 7 days. It was most widely reported on the 3rd, 6th and 8th.

Winds reached gale force at Forres on the 4th, at St. Abb's Head on the 16th and along the western seaboard on the 23rd and 26th.

Thunderstorms were widespread in central and southern areas on the 7th and were reported locally on the 6th, 8th, 14th and 21st. A man was killed by lightning during the storm in Edinburgh on the 7th.

Only two observations of aurora were reported—at Paisley on the 10th and at Eskdalemuir on the 25th.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 40.

MONTHLY RETURN
OF THE REGISTRAR-GENERAL
Scotland

BIRTHS, DEATHS AND MARRIAGES

Registered in sixteen of the Principal Towns

June, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of June 1939 the births (corrected for transfer to place of usual residence) of 4,224 living children, of whom 2,154 were males and 2,070 were females, and of 179 still-born children. Compared with the number in the previous month the living births were 241 fewer, male births being 130 fewer and female births 111 fewer. The monthly birth-rate in these towns taken collectively was 20.0 per thousand. It is the highest rate recorded in these towns for the month of June since 1932. This rate is 0.4 less than that for the previous month, but is 0.5 above the five years' average. The births of still-born children correspond to a rate of 41 per thousand total births registered (including still-born) as compared with 45 in the previous month.

In the individual towns the monthly birth-rate ranged from 25.3 in Coatbridge, 23.1 in Hamilton and 22.5 in Greenock, to 17.1 in Paisley, 17.0 in Dundee and in Dunfermline and 14.9 in Falkirk. In Glasgow and in Kilmarnock it was 21.7, in Perth 20.7, in Clydebank 19.5, in Aberdeen 19.1, in Kirkcaldy 18.7, in Motherwell and Wishaw and in Ayr 18.6, and in Edinburgh 17.5.

Of the 4,224 living children whose births were registered during the month 4,001 or 94.7 per cent. were legitimate, while 223 or 5.3 per cent. were illegitimate. The legitimate children numbered 188 fewer than in the previous month and the illegitimate children 53 fewer. The illegitimate percentage for the month is 0.9 below that for the previous month. In the individual towns it ranged from 6.7 in Aberdeen, 6.6 in Greenock and 6.0 in Glasgow, to 2.1 in Falkirk, 1.6 in Perth and 1.3 in Clydebank. In Edinburgh the rate was 4.3.

Marriages.—Marriages registered during the month numbered 2,690 and are 1,539 more than in the previous month. The marriage-rate, 12.7 per thousand, is 1.4 above that for the previous month and 0.6 above the average. In the individual towns it ranged from 16.0 in Greenock, 14.2 in Aberdeen and in Kilmarnock and 3.7 in Glasgow, to 8.1 in Motherwell and Wishaw, 7.6 in Clydebank and 7.0 in

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

Coatbridge. In Edinburgh the rate was 12.9. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,326, of which 1,229 were of males and 1,097 were of females. This number is 549 fewer than in the previous month, males being 224 fewer and females 325 fewer.

The monthly death-rate in these towns taken collectively was 11.0 per thousand, being 2.1 below that for the previous month and 1.0 below the average. It is the lowest rate ever recorded in these towns for the month of June. In the towns taken individually the death-rate ranged from 13.0 in Hamilton, 12.4 in Perth and 11.5 in Dundee, to 9.6 in Paisley, 7.8 in Dunfermline and 7.5 in Kilmarnock. In Glasgow the rate was 11.4, in Edinburgh and in Motherwell and Wishaw 11.3, in Ayr 11.0, in Kirkcaldy 10.9, in Falkirk 10.1, in Aberdeen 10.0, in Clydebank 9.9, and in Greenock and in Coatbridge 9.7.

Deaths of children aged less than one year numbered 244 and equalled an infantile mortality rate of 64 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. It is the lowest rate ever recorded in these towns for the month of June. These deaths are 53 fewer than in the previous month, while the rate is 11 less than in that month and 11 below the average. In the individual towns this rate ranged from 95 in Motherwell and Wishaw, 82 in Aberdeen and 81 in Greenock, to 21 in Dunfermline, 16 in Kilmarnock and 0 in Hamilton. In Falkirk the rate was 75, in Glasgow and in Clydebank 70, in Dundee 59, in Edinburgh 58, in Ayr 57, in Paisley 50, in Perth 40, in Kirkcaldy 36 and in Coatbridge 34.

Causes of Death.—Deaths from the principal epidemic diseases numbered 60 and equalled a death-rate of 0.3 per thousand. These deaths are 16 fewer than in the previous month but the rate is the same. They include none from typhoid fever, none from measles, 4 from scarlet fever, 25 from whooping-cough, 9 from diphtheria, 8 from influenza, 1 from cerebro-spinal fever, and 13 from other epidemic diseases, 6 of which were ascribed to lethargic encephalitis, 5 to erysipelas and 2 to dysentery. Compared with the number in the previous month deaths from scarlet fever are 2 more, from whooping-cough 6 more, from diphtheria 23 fewer, from influenza 1 fewer, from cerebro-spinal fever 1 fewer and from other epidemic diseases 3 more. In the previous month 1 death was registered from typhoid fever and 1 from measles.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 206 and equalled a death-rate of 1.0 per thousand. This is the lowest death-rate from these diseases hitherto recorded in these towns for the month of June. Compared with the number in the previous month these deaths are 74 fewer, while the rate is 0.3 less and is 0.2 below the average.

Deaths from all forms of tuberculosis numbered 188, of which 135 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 27 fewer and those from respiratory tuberculosis are also 27 fewer. Compared with the average the former are 4 fewer and the latter 12 fewer.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

JUNE, 1939.

Mean barometric pressure, 30.005 ins.; greater than the average* by 0.007 in.

Mean temperature, 57.0° F.; greater by 2.0° F.

Mean daily range of temperature, 18.0° F.; greater by 2.7° F.

Mean daily sunshine, 8.00 hours; greater by 1.72 hours.

Rain, depth in inches, 1.59; less by 0.51 inches.

Wind, direction of: a four days' excess of northerly and north-west winds.

The anticyclonic conditions of late May continued into June. During the first

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

week brilliant weather was experienced over the whole of Scotland. Record high temperatures occurred and an absolute drought was established in many places. North-westerly winds associated with an anticyclone off the west of Ireland brought a considerable fall in temperature on the 7th. A depression near Iceland on the 9th moved eastwards to Scandinavia and caused rain in most districts. A rather unsettled and rainy period followed though sunshine values were good locally. By the 21st pressure became unusually high to the north-west and low to the south of Great Britain, with cool, squally winds from a northerly point persisting for a few days. A depression from the Atlantic appeared off the north-west of Ireland on the 28th and, moving on a north-easterly course, brought rain to all districts. The month ended with a changeable westerly type. The extremes of pressure in Edinburgh were 30.54 inches on the 1st and 29.46 inches on the 28th.

For the fifth month in succession mean temperatures were above normal. This was mainly due to the excessive warmth of the first week. Scotland had the highest maxima on record for June from 3rd to 6th, temperatures of 80° to 85° F. being common. Extreme values reported were 88° F. at Glasgow on the 4th, 87° F. at Edinburgh (Liberton) on the 5th and 86° F. at Perth on the 4th. Radiation was very marked during the warm spell, the daily range of temperature exceeding 40° F. in many cases. Dalwhinnie had three such days in succession. The coldest weather occurred in the early morning of the 2nd and on the 12th and 13th. The lowest screen temperatures reported were 30° F. at West Linton on the 2nd and at Dalwhinnie on the 13th, and 31° F. at Wolfelee on the 2nd. Ground frosts occurred locally on 11 nights, the lowest readings being 24° F. at West Linton on the 2nd and at Dalwhinnie on the 13th; 25° F. was registered on the ground at Balmoral on the 13th and 26° F. at Auchincruive (Ayrshire) on the 2nd.

Sunshine was abundant almost everywhere, the only stations reporting even slight deficiencies being Stornoway and Fortrose. There were some remarkable daily totals, Lerwick having 16.6 hours on the 2nd and Tiree 16.3 hours on the 21st. The monthly aggregates exceeded 250 hours at many places in the west, the highest totals being 273 hours at Turnberry and 269 hours at Rothesay. These totals were the highest since June 1925 and represent excesses of 77 hours over the normal in each case. Oban had an aggregate of 266 hours or 84 hours more than the normal. The smallest aggregates reported were 163 hours at Stornoway, 164 hours at Duntulm (Skye) and 165 hours at Strathy (Sutherland).

Rainfall was below average over the greater part of Scotland. Totals just exceeded the average in some central districts; a few places in the extreme south had about 20 per cent. more than their normal rainfall. Except in the extreme north-west no rain fell until the 9th, and this rainless spell, following upon the dry weather of late May, accounted for an absolute drought which in the east and central districts had lasted for eighteen days. Daily falls exceeding an inch were recorded locally on the 9th, 14th and 27th. The largest falls reported on these days were 1.36 in. at Kinlochquich on the 9th, 1.65 inch at Lochwinnoch and 1.37 inch at Ardarroch (Garelochhead) on the 14th, and 1.70 inch at Kingairloch and 1.43 inch at Ardnadam (Argyll) on the 27th.

Snow fell on the Cairngorms on the 10th and 11th and again on the 24th. Drifts of this latter fall lay on Braeriach's south slope on the 27th.

Hail occurred widely on the 11th and 12th and also fell locally on the 13th, 16th and 30th.

Fog was reported in Orkney and at many places in east Scotland on the 21st and locally on the 2nd, 14th, 15th, 20th and 23rd.

Wind reached gale force on 10 days along the western seaboard, but on no occasion was the gale severe.

Thunderstorms were reported throughout the central and southern districts on the 30th. Local storms also occurred on the 7th, 11th, 16th and 28th.

No reports of aurora were received.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 43.

MONTHLY RETURN OF THE REGISTRAR-GENERAL

Scotland

BIRTHS, DEATHS AND MARRIAGES

Registered in sixteen of the Principal Towns

July, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of July 1939 the births (corrected for transfer to place of usual residence) of 4,004 living children, of whom 2,045 were males and 1,959 were females, and of 178 still-born children. Compared with the number in the previous month the living births were 220 fewer, male births being 109 fewer and female births 111 fewer. The monthly birth-rate in these towns taken collectively was 18.3 per thousand. This rate is 1.7 less than that for the previous month and is 0.3 below the five years' average. The births of still-born children correspond to a rate of 43 per thousand total births registered (including still-born). This rate is 2 more than that for the previous month.

In the individual towns the monthly birth-rate ranged from 22.4 in Coatbridge, 22.1 in Hamilton and 21.1 in Kirkcaldy and in Dunfermline, to 14.8 in Dundee, 13.2 in Falkirk and 11.3 in Perth. In Motherwell and Wishaw the rate was 19.9, in Glasgow and in Greenock 19.8, in Paisley 18.7, in Clydebank 16.7, in Edinburgh 16.5, in Kilmarnock and in Ayr 16.3 and in Aberdeen 16.0.

Of the 4,004 living children whose births were registered during the month, 3,772 or 94.2 per cent. were legitimate, while 232 or 5.8 per cent. were illegitimate. The legitimate children numbered 229 fewer than in the previous month but the illegitimate children 9 more. The illegitimate percentage for the month is 0.5 above that for the previous month. In the individual towns it ranged from 8.2 in Aberdeen, 8.1 in Hamilton and 6.3 in Dundee, to 2.3 in Falkirk, 1.5 in Greenock and 1.2 in Coatbridge. In Glasgow the rate was 6.2 and in Edinburgh 5.9.

Marriages.—Marriages registered during the month numbered 3,660 and are 970 more than the previous month. The marriage-rate, 16.7 per thousand, is 4.0 above that for the previous month and 2.0 above the average. In the individual towns it ranged from 19.6 in Kilmarnock, 18.6 in Dunfermline and 18.2 in Glasgow, to 11.8 in Motherwell and Wishaw, 8.3 in Ayr and 6.5 in Greenock. In Edinburgh the rate was 18.0. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,333, of which 1,231 were of males and 1,102 were of females. This number is 7 more than in the previous month, males being 2 more and females 5 more.

The monthly death-rate in these towns taken collectively was 10.7 per thousand, being 0.3 below that for the previous month and 0.4 below the average. In the towns taken individually the death-rate ranged from 12.3 in Greenock, 12.0 in Ayr and 11.0 in Hamilton, to 9.1 in Perth, 7.9 in Dunfermline and 7.3 in Kilmarnock. In Edinburgh, in Paisley and in Coatbridge it was 10.9, in Glasgow and in Aberdeen 10.8, in Dundee 10.6, in Clydebank 10.1, in Falkirk 9.8, in Motherwell and Wishaw 9.7 and in Kirkcaldy 9.4.

Deaths of children aged less than one year numbered 264 and equalled an infantile mortality rate of 67 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 20 more than in the previous month, while the rate is 3 more than in that month and 2 above the average. In the individual towns this rate ranged from 127 in Ayr, 99 in Greenock and 96 in Paisley, to 40 in Perth, 39 in Dunfermline and 0 in Falkirk. In Dundee it was 91, in Clydebank 83, in Motherwell and Wishaw and in Kirkcaldy 82, in Kilmarnock 79, in Hamilton 68, in Coatbridge 66, in Glasgow 65, in Aberdeen 56 and in Edinburgh 51.

Causes of Death.—Deaths from the principal epidemic diseases numbered 43, and equalled a death-rate of 0.2 per thousand. These deaths are 17 fewer than in the previous month and the rate is 0.1 less. They include none from typhoid fever, 1 from measles, 3 from scarlet fever, 10 from whooping-cough, 18 from diphtheria, 3 from influenza, 1 from cerebro-spinal fever, and 7 from other epidemic diseases, 4 of which were ascribed to dysentery, 2 to lethargic encephalitis and 1 to erysipelas. Compared with the number in the previous month deaths from measles are 1 more, from scarlet fever 1 fewer, from whooping-cough 15 fewer, from diphtheria 9 more, from influenza 5 fewer, from cerebro-spinal fever the same, and from other epidemic diseases 6 fewer.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 185 and equalled a death-rate of 0.8 per thousand. Compared with the number in the previous month these deaths are 21 fewer, while the rate is 0.2 less and is 0.3 below the average.

Deaths from all forms of tuberculosis numbered 161, of which 114 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 27 fewer and those from respiratory tuberculosis 21 fewer. Compared with the average the former are 8 fewer and the latter 7 fewer.

METEOROLOGICAL NOTES supplied by the Meteorological Office, Edinburgh.

JULY 1939.

Mean barometric pressure, 29.751 ins.; less than the average* by 0.178 in.
Mean temperature, 57.9° F.; less by 0.6° F.

Mean daily range of temperature, 13.1° F.; less by 1.2° F.

Mean daily sunshine, 3.91 hours; less by 1.27 hours.

Rain, depth in inches, 4.31; greater by 1.38 inches.

Wind, direction of; a four days' excess of south-westerly winds.

The principle features of the weather of July were the excessive rainfall, the marked deficiency of sunshine and the thunderstorms of the third week.

A succession of low pressure systems in the neighbourhood of the British Isles resulted in cloudy, wet weather with average or rather low temperatures during the month. An anticyclone to the west and south-west brought a short spell of fair weather on the 10th, when more than 15 hours' sunshine were registered at some Scottish stations. The day was, however, dull and almost

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

sunless in the extreme west and north-west. A depression which appeared on the north-east Atlantic on the 12th moved slowly in an east-south-east direction across the British Isles and caused unsettled weather with much rain or drizzle for several days. Mainly unsettled weather continued, and thunderstorms occurred in many places from the 15th to 19th. A prolonged spell of exceptionally dull weather in the north-west came to an end on the 18th. In 14 days, July 5th to 18th, Duntulm (Skye) registered only 2.3 hours' sunshine. On the 19th the same station had 12.8 hours, while Tiree had 12.7 hours and Stornoway 10.7 hours' sunshine. Changeable conditions persisted to the end of the month, mainly dull and showery weather being relieved by brief fair intervals.

Mean temperatures were slightly below normal almost everywhere. Not since January had the monthly mean for the country as a whole been below normal. In most districts the warmest days were the 4th, 20th and 21st. The 5th was also warm in the north of Scotland and the 29th along the east coast. The highest shade temperature, 76° F., was reported in Edinburgh on the 4th, at Kilmarnock on the 20th and at Ruthwell on the 21st. Fort William, Onich and Benmore all had maxima of 74° F. on the 20th. The coldest nights were the 24th and 25th, when temperatures in the screen fell to about 40° F. in all districts. The lowest readings reported were 32° F. at West Linton on the 24th, and 33° F. at Braemar and Wolfelee on the 24th and at Dalwhinnie on the 25th. Slight ground frosts were registered at some high level stations on the 1st, 11th, 19th, 24th and 25th. The lowest temperatures recorded by thermometers exposed on the ground were 26° F. on the 11th and 28° F. on the 19th, both at Dalwhinnie.

Sunshine totals were low in all districts. At many places in the north and west the aggregates did not reach half the normal figures. Dunbar had the largest aggregate with 165 hours, followed by Lundin Links with 151 hours and Ruthwell with 148 hours. Stornoway had only 57 hours' sunshine or 88 hours less than normal. Other small aggregates were 65 hours at Deerness (Orkney), 69 hours at Banff, and 70 hours at Gordon Castle and Fort Augustus.

The month was a very wet one in most districts. More than double the average rainfall occurred in central Scotland in an area embracing the Moray Firth and extending to the west coast and also in Orkney. The only places with even slightly less than the average fall were Edinburgh and an area around New Cumnock (Ayrshire). The wettest day was the 12th, when more than an inch of rain fell generally in Scotland. Over a considerable area in the west the measurements exceeded two inches on this day. The largest falls reported were 3.50 inches at Ardgour, 3.48 inches at Kinlochmoidart and 3.33 inches at Kinloch-quoich. Other heavy daily falls were 2.87 inches at Ratagan (Glenshiel) on the 11th; 3.22 inches at Troon and 1.66 inches at Prestwick on the 15th; 2.30 inches at Inveraray and 2.19 inches at Eskdalemuir on the 28th, and 1.80 inches at Drum Castle (Aberdeenshire) on the 31st.

Snow was reported on the high Cairngorms on the 1st and on Ben Nevis on the 23rd, a rare occurrence in July.

Hail was reported in many places on the 23rd and locally on the 1st, 2nd and 31st.

Fog of coastal type occurred in one place or other on 13 days. Lerwick and Wick experienced fog on 7 days and Edinburgh on 6 days.

Gales were infrequent and not severe. They were experienced on the western seaboard on the 2nd, 4th, 5th, 14th and 15th.

Thunder was reported on 21 days. On the 5th storms occurred in all parts of Scotland. The 14th, 15th and 19th were very disturbed days over all the southern counties. The storm of the 15th was most severe in the neighbourhood of Troon where the rainfall amounted to 3.22 inches, of which about 2 inches fell in 50 minutes. Some low parts of the town were flooded to a depth of 4 feet.

No reports of aurora were received.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 56.

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

August, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of August 1939 the births (corrected for transfer to place of usual residence) of 3,830 living children, of whom 2,004 were males and 1,826 were females, and of 192 still-born children. Compared with the number in the previous month the living births were 174 fewer, male births being 41 fewer and female births 133 fewer. The monthly birth-rate in these towns taken collectively was 17.5 per thousand. This rate is 0.8 less than that for the previous month and is 0.2 below the five years' average. With the exception of rate for August 1936, which was also 17.5, this is the lowest birth-rate recorded for the month of August in any year. The births of still born children correspond to a rate of 48 per thousand total births registered (including still-born). This rate is 5 more than that for the previous month.

In the individual towns the monthly birth-rate ranged from 22.1 in Dunfermline, 21.2 in Hamilton and 20.8 in Greenock, to 15.0 in Falkirk, 14.5 in Kirkcaldy and 12.6 in Perth. In Paisley, in Kilmarnock and in Ayr it was 19.8, in Coatbridge 18.5, in Aberdeen 18.2, in Glasgow 18.1, in Clydebank 17.7, in Motherwell and Wishaw 17.2, in Dundee 15.7 and in Edinburgh 15.4.

Of the 3,830 living children whose births were registered during the month, 3,608 or 94.2 per cent. were legitimate, while 222 or 5.8 per cent. were illegitimate. The legitimate children numbered 164 fewer than in the previous month and the illegitimate children 10 fewer. The illegitimate percentage for the month is the same as that for the previous month. In the individual towns it ranged from 7.9 in Aberdeen, 7.7 in Perth and 7.2 in Ayr, to 2.8 in Clydebank, 2.0 in Motherwell and Wishaw and 0 in Kirkcaldy. In Glasgow the rate was 6.1 and in Edinburgh 6.2.

NOTE.—*The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.*

Marriages.—Marriages registered during the month numbered 2,046 and are 1,614 fewer than in the previous month. The marriage-rate, 9.4 per thousand, is 7.3 below that for the previous month but 0.9 above the average. It is the highest marriage-rate recorded for the month of August in any year since 1920. In the individual towns it ranged from 12.9 in Dunfermline, 11.5 in Edinburgh and 11.4 in Aberdeen, to 4.9 in Motherwell and Wishaw, 4.4 in Clydebank and 3.9 in Coatbridge. In Glasgow the rate was 9.5. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,364, of which 1,254 were of males and 1,110 were of females. This number is 31 more than in the previous month, males being 23 more and females 8 more.

The monthly death-rate in these towns taken collectively was 10.8 per thousand, being 0.1 above that for the previous month and 0.2 above the average. In the towns taken individually the death-rate ranged from 12.2 in Kirkcaldy, 11.6 in Dundee and in Falkirk and 11.4 in Greenock, to 8.5 in Dunfermline, 8.3 in Clydebank and 7.9 in Kilmarnock. In Edinburgh the rate was 11.3, in Glasgow 11.1, in Ayr 10.9, in Hamilton 10.7, in Paisley 10.3, in Coatbridge 9.9, in Perth 9.7, in Aberdeen 9.1 and in Motherwell and Wishaw 9.0.

Deaths of children aged less than one year numbered 223 and equalled an infantile mortality rate of 56 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 41 fewer than in the previous month, while the rate is 11 less than in that month and 4 below the average. In the individual towns this rate ranged from 82 in Perth, 77 in Falkirk and 75 in Paisley, to 16 in Kilmarnock, 9 in Motherwell and Wishaw and 0 in Clydebank. In Glasgow the rate was 67, in Greenock 64, in Coatbridge 56, in Ayr 54, in Kirkcaldy 49, in Edinburgh 47, in Dundee 46, in Aberdeen 43, in Hamilton 41 and in Dunfermline 38.

Causes of Death.—Deaths from the principal epidemic diseases numbered 32 and equalled a death-rate of 0.1 per thousand. These deaths are 11 fewer than in the previous month and the rate is 0.1 less. They include 2 from typhoid fever, 1 from measles, none from scarlet fever, 6 from whooping-cough, 13 from diphtheria, 1 from influenza, none from cerebro-spinal fever, and 9 from other epidemic diseases, 4 of which were ascribed to lethargic encephalitis, 3 to dysentery and 2 to erysipelas. Compared with the number in the previous month deaths from typhoid fever are 2 more, from measles the same, from whooping-cough 4 fewer, from diphtheria 5 fewer, from influenza 2 fewer and from other epidemic diseases 2 more. In the previous month 3 deaths were registered from scarlet fever and 1 from cerebro-spinal fever.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 171 and equalled a death-rate of 0.8 per thousand. With the exception of the rate for August 1935, which was also 0.8, it is the lowest respiratory death-rate recorded for the month of August in any year. Compared with the number in the previous month these deaths are 14 fewer, while the rate is the same but is 0.1 below the average.

Deaths from all forms of tuberculosis numbered 189, of which 146 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 28 more and those from respiratory tuberculosis 32 more. Compared with the average the former are 27 more and the latter 21 more.

BIRTHS, DEATHS AND MARRIAGES

Registered in sixteen of the Principal Towns

September, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of September 1939 the births (corrected for transfer to place of usual residence) of 3,560 living children, of whom 1,826 were males and 1,734 were females, and of 144 still-born children. Compared with the number in the previous month the living births were 270 fewer, male births being 178 fewer and female births 92 fewer. The monthly birth-rate in these towns taken collectively was 16.8 per thousand. This rate is 0.7 less than that for the previous month and is 0.1 below the five years' average. The births of still-born children correspond to a rate of 39 per thousand total births registered (including still-born). This rate is 9 below that for the previous month.

In the individual towns the monthly birth-rate ranged from 21.8 in Coatbridge, 20.4 in Greenock and in Hamilton and 19.0 in Kilmarnock, to 13.2 in Clydebank, 12.3 in Kirkcaldy and 10.4 in Perth. In Falkirk it was 18.1, in Glasgow 17.8, in Paisley 16.5, in Motherwell and Wishaw 16.1, in Dundee 16.0, in Edinburgh 15.4, in Aberdeen 15.3, in Ayr 15.1 and in Dunfermline 14.7.

Of the 3,560 living children whose births were registered during the month, 3,406 or 95.7 per cent. were legitimate, while 154 or 4.3 per cent. were illegitimate. The legitimate children numbered 202 fewer than in the previous month and the illegitimate children 68 fewer. The illegitimate percentage for the month is 1.5 below that for the previous month. In the individual towns it ranged from 9.7 in Perth, 6.4 in Dundee and 5.9 in Ayr, to 1.5 in Hamilton, 1.1 in Motherwell and Wishaw and 0 in Coatbridge. In Glasgow the rate was 4.9 and in Edinburgh 4.2.

Marriages.—Marriages registered during the month numbered 4,215 and are 2,169 more than in the previous month. The marriage-rate, 19.9 per thousand, is 10.5 above that for the previous month and 9.2 above the average. It is the highest marriage-rate recorded for any month in this series of Reports. In the individual towns it ranged from 41.4 in Perth, 29.3 in Ayr and 25.6 in Aberdeen, to 11.8 in Kilmarnock, 9.3 in Motherwell and Wishaw and 8.1 in Coatbridge. In Glasgow the rate was 19.1

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

and in Edinburgh 23·7. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,378, of which 1,277 were of males and 1,101 were of females. This number is 14 more than in the previous month, males being 23 more but females 9 fewer.

The monthly death-rate in these towns taken collectively was 11·2 per thousand, being 0·4 above that for the previous month and 0·3 above the average. In the towns taken individually the death-rate ranged from 14·7 in Perth, 14·2 in Ayr and 12·0 in Motherwell and Wishaw, to 9·6 in Clydebank, 8·6 in Aberdeen and 6·7 in Falkirk. In Greenock the rate was 11·9, in Dundee and in Coatbridge 11·8, in Glasgow 11·6, in Edinburgh 11·3, in Paisley 11·0, in Kirkcaldy 10·8, in Dunfermline 10·4, in Kilmarnock 10·3 and in Hamilton 10·2.

Deaths of children aged less than one year numbered 250 and equalled an infantile mortality rate of 65 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 27 more than in the previous month, while the rate is 9 more than in that month and 1 above the average. In the individual towns this rate ranged from 109 in Ayr, 108 in Greenock and 100 in Paisley, to 42 in Hamilton, 32 in Kilmarnock and 22 in Perth. In Motherwell and Wishaw it was 87, in Falkirk 80, in Coatbridge 70, in Glasgow 68, in Dundee 65, in Aberdeen 61, in Dunfermline 58, in Kirkcaldy 51 and in Edinburgh 44.

Causes of Death.—Deaths from the principal epidemic diseases numbered 38 and equalled a death-rate of 0·2 per thousand. These deaths are 6 more than in the previous month and the rate is 0·1 more. They include 1 from typhoid fever, none from measles, 1 from scarlet fever, 5 from whooping-cough, 12 from diphtheria, 8 from influenza, 5 from cerebro spinal fever, and 6 from other epidemic diseases, 5 of which were ascribed to lethargic encephalitis and 1 to erysipelas. Compared with the number in the previous month deaths from typhoid fever are 1 fewer, from scarlet fever 1 more, from whooping-cough 1 fewer, from diphtheria 1 fewer, from influenza 7 more, from cerebro-spinal fever 5 more and from other epidemic diseases 3 fewer. In the previous month 1 death was registered from measles.

Deaths attributed to respiratory diseases exclusive of those associated with tuberculosis and with influenza numbered 189 and equalled a death-rate of 0·9 per thousand. It is the lowest respiratory death-rate recorded for the month of September in any year. Compared with the number in the previous month these deaths are 18 more, while the rate is 0·1 more but is 0·2 below the average.

Deaths from all forms of tuberculosis numbered 148, of which 115 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 41 fewer and those from respiratory tuberculosis 31 fewer. Compared with the average the former are 8 fewer and the latter 6 fewer.

METEOROLOGICAL NOTES

supplied by the Meteorological Office, Edinburgh.

SEPTEMBER 1939.

(*Notes and Table for August will be found on pages 73 and 74.*)

Mean barometric pressure, 30·170 ins. ; greater than the average* by 0·193 ins.

Mean temperature, 55·6° F. ; greater by 2·1° F.

Mean daily range of temperature, 14·2° F. ; greater by 1·0° F.

Mean daily sunshine, 4·06 hours ; less by 0·14 hour.

Rain, depth in inches, 1·93 ; less by 0·68 inch.

Wind, direction of ; a seven days' excess of winds between N.W. and N.E.

Features of the weather of September were its pleasantly mild character, its deficient rainfall—practically all the rain falling in the first twelve days—and severe and widespread thunderstorms on the 3rd.

* The averages of normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

The extremes of pressure in Edinburgh were 30.59 inches on the 18th and 29.67 inches on the 3rd.

Mean temperatures were above normal in all districts. At several widely separated stations the excess over the normal amounted to 3° F. and at Arbroath it was 3.8° F. It was the seventh successive September in which the mean temperature for the country as a whole exceeded the normal. The warmest days were from the 2nd to the 5th, when shade temperatures rose to 70° F. or slightly above in many places. The highest readings reported, both 76° F., were registered at Kilmarnock on the 2nd and in Edinburgh on the 5th; maxima only one degree lower occurred at Paisley and Ruthwell on the 2nd and at Forres on the 5th. Night temperatures were also high in the first week. At Prestwick temperature did not fall below 63° F. on the 3rd; Kilmarnock, Troon and Ayr had minima of 62° F. on the same date. The coldest spell occurred in the closing days of the month, when slight frosts were registered in many places. Extreme minima reported were 25° F. at West Linton on the 28th, 26° F. at Dalwhinnie on the 27th, and 27° F. at Balmoral and Braemar on the 28th. Day temperatures did not rise much above 50° F. about this time. At Banff and Strathy the maxima on the 30th only touched 49° F. Ground frosts were widespread from the 28th to 30th and occurred locally on eight other days. A thermometer exposed over grass registered 21° F. at West Linton each night from the 28th to 30th, and this minimum was also recorded at Dalwhinnie on the 30th.

There was a lack of sunshine at most places in east and southern Scotland and a small excess in the west. Over the central area the variation from normal was slight. The largest aggregate was 143 hours at Arbroath, followed by 138 hours at Carnoustie, Rothesay, Troon, Prestwick and Ayr. Several stations had less than 100 hours' sunshine, the smallest aggregates being 81 hours at Marchmont, 86 hours at Eskdalemuir and 89 hours at Banff.

Rain fell generally in the first 13 days. Thereafter precipitation was infrequent and slight. Many places in the south and west experienced an absolute drought from the 14th, which was only broken by showers on the 30th. As the result of thunderstorms a few scattered stations had monthly totals in excess of the normal, but over most of Scotland the totals were well below normal. The deficiency exceeded 50 per cent. of normal in parts of Ross-shire and at Glen Afton (Ayrshire). Daily falls exceeding an inch were numerous in all districts during the first ten days. None occurred after the 12th. By far the wettest day was the 3rd, when some unusually large amounts were reported in the west. These included 3.88 inches at Skallary (Barra), 3.25 inches at Dunlosit and 3.17 inches at Eallabus, both stations in Islay, 2.39 inches at Bunessan (Mull) and 2.21 inches at Glenbranter. Some other heavy daily falls were 1.42 inches at Selkirk on the 2nd, 1.54 inches at Glenmoidart on the 4th, 1.88 inches at Ardgour and 1.80 inches at Inveraray on the 7th, 1.44 inches at Glenmoidart on the 8th, 1.44 inches at Kilmelford on the 9th and 1.64 inches at Nethy Bridge on the 10th.

Hail fell at Carlisle during a thunderstorm on the 3rd.

Fog was reported locally on 13 days. It occurred most frequently in the Clyde area, Greenock experiencing fog on 9 days.

Gales were reported at Lerwick on the 9th and 11th, at St. Abb's Head on the 11th and 12th and at Banff on the 24th.

Thunderstorms occurred in all districts on the 3rd and were of unusual severity in the west. Exceptionally heavy rain caused flooding in Islay, which was said to be the worst ever experienced in the island. Serious landslides occurred on both sides of Loch Eck which blocked waterways and culverts. On the main Dunoon-Glasgow road it took a mechanical excavator a fortnight to clear a traffic way through the deposits of debris. Thunder was also reported locally on 14 other days.

Aurora was observed on 9 nights. It was seen as far south as St. Abb's Head on the 9th and 14th.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 72.

Abstract.

(Abbotsinch) and Aberdeen at 7h. and 18h.
* At Edinburgh, Paisley and Ayr observations are made at 9h. and 21h., at Dundee, Greenock, Kirkcaldy, Kilmarnock, Dunfermline and Perth at 9h. only, and at Glasgow and inches.)

METEOROLOGICAL NOTES
supplied by the Meteorological Office, Edinburgh.**AUGUST 1939.***(Not published in August Return.)*

Mean barometric pressure, 30.021 inches; greater than the average* by 0.133 inch.

Mean temperature, 59.7° F.; greater by 2.2° F.

Mean daily range of temperature, 13.6° F.; greater by 0.3° F.

Mean daily sunshine, 4.22 hours; less by 0.33 hour.

Rain, depth in inches, 1.81; less by 1.85 inches.

Wind, direction of; a six days' excess of N.E. and east winds.

The principal features of the weather of August were the mild character of the month, the generally deficient rainfall, the abundant sunshine in the west of Scotland and the thunderstorms of the last week.

The extremes of pressure in Edinburgh were 30.32 inches on the 15th and 29.56 inches on the 9th.

Mean temperatures were high everywhere. This was the eighth successive August with a mean temperature above the normal. The warmest days were the 18th, 19th and 28th, when shade temperatures exceeded 70° F. in many places. On the 18th, 78° F. was registered at Perth, Edinburgh, Kelso, Wolfleee and Marchmont, and this maximum was also recorded at Ruthwell on the 19th and at Kilmarnock on the 28th. Nights were warm around the latter date, screen temperatures remaining above 60° F. in many places. The highest night minima reported were 62° F. at Onich and 61° F. at Colmonell, both on the 27th. Rather cool periods occurred in the first week and about the middle of the month, when screen temperatures fell to 40° F. or only slightly above in many places. Much lower readings were reported at high level stations, Dalwhinnie registering 31° F. on the 5th and West Linton 32° F. on the 13th. Some rather low day maxima were registered during the first week. At Aberdeen shade temperature did not rise above 56° F. on the 7th, while maxima of 57° F. were recorded at Dungavel on the 2nd and at Braemar on the 3rd and 8th. Ground frosts occurred at Dalwhinnie on the 5th and 7th.

Sunshine was abundant in the west, where totals were generally well above average. In east and central Scotland there was a deficiency. Tiree and Stornoway headed the list of aggregates with 213 and 204 hours sunshine respectively, the Stornoway total being 76 hours in excess of the normal. Other large aggregates were 186 hours at Duntrium (Skye) and 173 hours at Forres. The smallest aggregates were 109 hours at Cardross, 117 hours at North Berwick and 118 hours at Boghall near Edinburgh.

Less than the normal rainfall was measured in all areas. The deficiency was greatest in the southern half of Scotland, where most places had rather less than half the normal amount. The largest daily falls reported were 1.45 inch at Glenshiel on the 11th, 1.94 inch at Colmonell and 1.55 inch at Prestwick on the 19th, and 1.60 inch at Gorebridge (Midlothian) on the 27th.

Hail was reported locally on the 10th, 19th and 26th.

Fog of coastal type was experienced on 17 days. It was widespread and persistent in east Scotland from the 21st to the 29th.

No gales occurred. Conditions were in fact unusually quiet.

Thunder was reported on 16 days. In Shetland the first thunderstorm of the summer occurred on the 9th, when heavy rain caused flooding in Lerwick and the neighbouring country. Thunderstorms occurred in all parts of Scotland on the 26th and were severe in the southern counties. At Jedburgh two people were killed by lightning. At Troon heavy rain caused severe flooding. Buildings were struck in Edinburgh and Arbroath. At the latter place flooding occurred to a depth of several feet and telephone services were interrupted.

Aurora was observed on seven nights.

* The averages or normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 74.

MONTHLY RETURN OF THE REGISTRAR-GENERAL

Scotland

BIRTHS, DEATHS AND MARRIAGES

Registered in sixteen of the Principal Towns

October, 1939

REPORT

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of October 1939 the births (corrected for transfer to place of usual residence) of 3,753 living children; of whom 1,943 were males and 1,810 were females. Compared with the number in the previous month the living births were 193 more, male births being 117 more and female births 76 more. The monthly birth-rate in these towns taken collectively was 17.2 per thousand. This rate is 0.4 more than that for the previous month but is 0.4 below the five years' average.

In the individual towns the monthly birth-rate ranged from 20.0 in Hamilton, 19.3 in Coatbridge and 18.7 in Glasgow, to 15.2 in Dundee, 14.2 in Edinburgh and 11.7 in Ayr. In Clydebank the rate was 18.6, in Greenock 18.3, in Kilmarnock and in Perth 17.8, in Motherwell and Wishaw 17.3, in Paisley 17.2, in Aberdeen 17.1, in Dunfermline 17.0, and in Kirkcaldy and in Falkirk 15.3.

Of the 3,753 living children whose births were registered during the month, 3,549 or 94.6 per cent. were legitimate, while 204 or 5.4 per cent. were illegitimate. The legitimate children numbered 143 more than in the previous month and the illegitimate children 50 more. The illegitimate percentage for the month is 1.1 above that for the previous month. In the individual towns it ranged from 9.5 in Coatbridge, 7.4 in Dunfermline and 7.0 in Motherwell and Wishaw, to 2.6 in Clydebank, 2.4 in Ayr and 2.0 in Falkirk. In Glasgow the rate was 5.5 and in Edinburgh 5.6.

Marriages.—Marriages registered during the month numbered 3,022 and are 1,193 fewer than in the previous month. The marriage-rate, 13.8 per thousand, is 6.1 below that for the previous month but 5.6 above the average. It is the highest marriage-rate recorded in these towns for the month of October in any year. In the individual towns it ranged from 17.7 in Aberdeen, 16.5 in Perth and 15.1 in Dundee, to 8.9 in Greenock, 8.7 in Motherwell and Wishaw and 5.5 in Coatbridge. In Glasgow the rate was 14.4 and in Edinburgh 13.9. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,842, of which 1,518 were of males and 1,324 were of females. This number is 464 more than in the previous month, males being 241 more and females 223 more.

The monthly death-rate in these towns taken collectively was 13.0 per thousand, being 1.8 above that for the previous month and 1.3 above the average. In the towns taken individually the death-rate ranged from 15.4 in Paisley, 15.1 in Dundee and 14.3 in Greenock and in Ayr, to 10.4 in Coatbridge, 10.3 in Clydebank and 9.2 in Dunfermline. In Edinburgh it was 13.3, in Glasgow 13.1, in Hamilton 11.9, in Aberdeen and in Motherwell and Wishaw 11.8, in Kilmarnock 11.7, in Falkirk 11.6, in Perth 11.0 and in Kirkcaldy 10.9.

Deaths of children aged less than one year numbered 317 and equalled an infantile mortality rate of 80 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 67 more than in the previous month, while the rate is 15 more than in that month and 4 above the average. In the individual towns this rate ranged from 113 in Dundee, 110 in Clydebank and 104 in Perth, to 47 in Kilmarnock and 18 in Ayr and in Dunfermline. In Motherwell and Wishaw it was 101, in Falkirk 98, in Glasgow 91, in Greenock 85, in Hamilton 81, in Kirkcaldy 66, in Edinburgh 60, in Coatbridge 56 and in Aberdeen and in Paisley 55.

Causes of Death.—Deaths from the principal epidemic diseases numbered 56 and equalled a death-rate of 0.3 per thousand. These deaths are 18 more than in the previous month and the rate is 0.1 more. They include none from typhoid fever, none from measles, 1 from scarlet fever, 5 from whooping-cough, 23 from diphtheria, 11 from influenza, 3 from cerebro-spinal fever, and 13 from other epidemic diseases, 7 of which were ascribed to dysentery, 3 to lethargic encephalitis, 2 to erysipelas and 1 to acute poliomyelitis. Compared with the number in the previous month deaths from scarlet fever are the same, from whooping-cough the same, from diphtheria 11 more, from influenza 3 more, from cerebro-spinal fever 2 fewer and from other epidemic diseases 7 more. In the previous month 1 death was registered from typhoid fever.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 276 and equalled a death-rate of 1.3 per thousand. Compared with the number in the previous month these deaths are 87 more, while the rate is 0.4 more but is 0.1 below the average.

Deaths from all forms of tuberculosis numbered 169, of which 140 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 21 more, and those from respiratory tuberculosis 25 more. Compared with the average the former are 17 more and the latter 22 more.

METEOROLOGICAL NOTES.

supplied by the Meteorological Office, Edinburgh.

OCTOBER 1939.

Mean barometric pressure, 29.999 ins.; greater than the average* by 0.122 ins.

Mean temperature, 46.0° F.; less by 2.0° F.

Mean daily range of temperature, 13.0° F.; greater by 1.7° F.

Mean daily sunshine, 3.27 hours; greater by 0.33 hour.

Rain, depth in inches, 2.47; less by 0.53 inch.

Wind, direction of; a six days' excess of north and N.E. winds.

Features of the weather of October were the abundant sunshine and exceptionally small rainfall in the west, contrasting with an area of deficient sunshine in the south-east and rather heavy precipitation in central districts. Over Scotland as a whole it was the coolest October since 1932. The extremes of pressure in Edinburgh were 30.33 inches on the 19th and 29.51 inches on the 5th.

* The averages of normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

In the extreme north and north-west mean temperatures differed little from the normal, but over the greater part of Scotland the month was a cool one. At several places in the south and south-west mean temperatures were more than 3° F. below normal. The warmest days were the 6th and 7th, when shade temperatures rose to 60° F. or slightly above in many places. The highest reading reported was 65° F. at Kilmarnock on the 7th; 64° F. was reported at Onich on the 6th and 7th and at Newton Stewart and Auchincruive on the latter date. The coldest nights were the 18th and 28th, when sharp frost occurred in inland districts. Extreme screen minimum temperatures on the 18th were 20° F. at Braemar, 21° F. at Dalwhinnie and 23° F. at Balmoral; on the 28th the lowest readings reported were 25° F. at Strathy, Perth, Prestwick and Kilmarnock. Ground frosts were registered in one place or other on every night except the 18th, 14th and 23rd. A thermometer exposed over grass at Auchincruive registered 12° F. (20 degrees of frost) on the 28th. Other low grass minima were 14° F., also at Auchincruive, on the 29th, and 15° F. at Dalwhinnie and Braemar on the 18th and at West Linton on the 20th.

Sunshine was abundant in western districts and exceeded the normal over most of the country. There was, however, an appreciable lack of sunshine in the south-east and at Dundee. Slight deficiencies were also reported at Montrose and Banff. Duntulm (Skye) and Oban had the large aggregates of 150 and 146 hours' sunshine respectively, followed by Stornoway and Kilmarnock, each with 134 hours, and Dumfries with 131 hours. The smallest aggregates were 77 hours at Marchmont, 79 hours at North Berwick, 80 hours at Dundee and 83 hours at Dunbar.

Over the greater part of Scotland rainfall was below normal. The deficiency was most marked in the Western Highlands, where some stations had less than a quarter of their normal precipitation. Some new low records were set up in the west for the three months August to October. Fort William had only 8.81 inches of rain in the quarter, the previous lowest total for this period being 8.88 inches in 1915. In east Scotland and over a large part of the central area the rainfall of October exceeded the normal. Braemar had almost double its average amount. The wettest days were the 9th and 10th. Falls exceeding an inch occurred on both these dates in all districts. The lowest measurements reported on the 9th were 2.85 inches at Ardvorlich near Lochearnhead, 2.70 inches at Edinchip, also near Lochearnhead, and 2.61 inches at Dall Avon near Aberfeldy. On the 10th the lowest falls were 2.70 inches at Glenbranter and also at Forrest Lodge, Dalry, and 2.38 inches at Kinnell Gardens, Killin. Other outstanding daily falls were 1.91 inches at Balnaboth (Glen Prosen) and 1.54 inches at Drum Castle on the 5th, 2.90 inches at Kingairloch on the 7th, 1.61 inches at Kippen on the 8th, 1.94 inches at Balnaboth and 1.74 inches at Bridge of Dye on the 11th, 1.72 inches at Cawdor on the 14th and 1.80 inches at Kinlochquoich on the 22nd.

Snow was reported from high level stations on 11 days. On the 24th and 25th there were widespread falls over practically the whole of the central areas. Hail fell locally on 11 days.

Fog, mainly of coastal type, was reported locally on all but three days. It was of frequent occurrence in the Clyde area.

Winds were generally from the north-east and reached gale force in coastal districts on 9 days. On the Bell Rock gusts up to 77 and 67 miles per hour were registered on the 10th and 26th respectively.

Thunder was reported at one place or other on the 11th, 25th, 26th and 27th. Reports were fairly numerous and widespread on the 11th.

Aurora was observed on 18 nights. It was exceptionally frequent at Lerwick, where it was observed on 16 out of the first 20 nights. There was an outstanding display on the 3rd, of which Mr. Seton Gordon has written:—"The whole of the heavens from horizon to horizon seemed to be in motion and alive, and the light of the moon failed to diminish the grandeur of this spectacle." The display was seen at many places in the south of Scotland and at Foynes in County Limerick. Another fine display occurred on the 18th; and this also was seen at Foynes.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 82.

MONTHLY RETURN
OF THE REGISTRAR-GENERAL
Scotland

BIRTHS, DEATHS AND
MARRIAGES

Registered in sixteen of the Principal Towns

November, 1939

REPORT

THIS monthly return is remarkable from the fact that it reveals several records in the figures contained in this series of return.

It shows the lowest birth-rate ever recorded in any month since registration was inaugurated in Scotland over eighty years ago.

Comparison of the figures in the return with those for the month of November in previous years shows not only the lowest general death-rate, but also the lowest death-rate from respiratory diseases and the lowest infantile mortality rate.

The marriage-rate is the highest recorded for the month of November since 1920.

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of November 1939 the births (corrected for transfer to place of usual residence) of 3,839 living children, of whom 1,729 were males and 1,610 were females, and of 156 still-born children. Compared with the number in the previous month the living births were 414 fewer, male births being 214 fewer and female births 200 fewer. The monthly birth-rate in these towns taken collectively was 15.8 per thousand. This rate is 1.4 less than that for the previous month and is 1.6 below the five years' average. It is the lowest birth-rate recorded in these Reports for any month in any year. The births of still-born children correspond to a rate of 45 per thousand total births registered (including still-born). This rate is 4 above that for the previous month.

In the individual towns the monthly birth-rate ranged from 24.2 in Coatbridge, 22.2 in Hamilton and 17.6 in Motherwell and Wishaw, to 13.7 in Clydebank, 12.9 in Kirkcaldy and 12.7 in Falkirk. In Paisley it was 17.2, in Glasgow and in Greenock 16.2, in Dundee and in Perth 16.0, in Aberdeen and in Dunfermline 15.3, in Ayr 14.8, in Kilmarnock 14.2 and in Edinburgh 13.9.

NOTE.—*The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.*

Of the 3,339 living children whose births were registered during the month, 3,146 or 94.2 per cent. were legitimate, while 193 or 5.8 per cent. were illegitimate. The legitimate children numbered 403 fewer than in the previous month and the illegitimate children 11 fewer. The illegitimate percentage for the month is 0.4 above that for the previous month. In the individual towns it ranged from 11.0 in Greenock, 8.4 in Aberdeen and 8.0 in Ayr, to 2.2 in Coatbridge, 1.0 in Motherwell and Wishaw and 0 in Kilmarnock. In Glasgow the rate was 5.8 and in Edinburgh 6.7.

Marriages.—Marriages registered during the month numbered 1,981 and are 1,041 fewer than in the previous month. The marriage-rate, 9.4 per thousand, is 4.4 below that for the previous month but 2.6 above the average. It is the highest marriage-rate recorded for November in any year since 1920. In September this rate was 19.9 and in October 13.8. In the individual towns it ranged from 12.7 in Ayr, 12.0 in Perth and 11.7 in Dunfermline, to 4.4 in Falkirk, 3.8 in Coatbridge and 3.3 in Clydebank. In Glasgow the rate was 10.4 and in Edinburgh 8.7. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,654, of which 1,409 were of males and 1,245 were of females. This number is 188 fewer than in the previous month, males being 109 fewer and females 79 fewer.

The monthly death-rate in these towns taken collectively was 12.5 per thousand, being 0.5 below that for the previous month and 1.3 below the average. It is the same as that for November of last year, which was the lowest recorded for November in this series of Reports. In the towns taken individually the death-rate ranged from 16.7 in Hamilton, 15.1 in Greenock and 14.9 in Paisley, to 11.2 in Ayr, 9.9 in Clydebank and 8.6 in Falkirk. In Motherwell and Wishaw it was 14.1, in Coatbridge 13.2, in Edinburgh 12.9, in Dundee 12.8, in Glasgow 12.3, in Kirkcaldy and in Kilmarnock 11.8, in Aberdeen 11.6 and in Dunfermline and in Perth 11.4.

Deaths of children aged less than one year numbered 262 and equalled an infantile mortality rate of 69 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. It is the lowest rate recorded for the month of November in this series of Reports. These deaths are 55 fewer than in the previous month, while the rate is 11 less than in that month and 29 below the average. In the individual towns this rate ranged from 149 in Perth, 143 in Paisley and 114 in Motherwell and Wishaw and in Coatbridge, to 53 in Edinburgh and 48 in Dundee and in Kilmarnock. In Kirkcaldy it was 105, in Greenock 104, in Hamilton 97, in Dunfermline 93, in Clydebank 87, in Glasgow and in Falkirk 61 and in Aberdeen and in Ayr 57.

Causes of Death.—Deaths from the principal epidemic diseases numbered 59 and equalled a death-rate of 0.3 per thousand. These deaths are 3 more than in the previous month. They include 1 from typhoid fever, none from measles, 1 from scarlet fever, 3 from whooping-cough, 25 from diphtheria, 12 from influenza, 7 from cerebro-spinal fever, and 10 from other epidemic diseases, 6 of which were ascribed to erysipelas, 3 to dysentery and 1 to acute poliomyelitis. Compared with the number in the previous month deaths from typhoid fever are 1 more, from scarlet fever the same, from whooping-cough 2 fewer, from diphtheria 2 more, from influenza 1 more, from cerebro-spinal fever 4 more, and from other epidemic diseases 3 fewer.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 298 and equalled a death-rate of 1.4 per thousand. It is the lowest rate recorded for the month of November in this series of Reports. Compared with the number in the previous month these deaths are 22 more, while the rate is 0.1 more but is 0.9 below the average.

Deaths from all forms of tuberculosis numbered 175, of which 143 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 6 more and those from respiratory tuberculosis 3 more. Compared with the average the former are the same but the latter 4 more.

METEOROLOGICAL NOTES.

supplied by the Meteorological Office, Edinburgh.
NOVEMBER 1939.

Mean barometric pressure, 29.649 ins.; less than the average* by 0.201 in.

Mean temperature, 44.7° F.; greater by 2.7° F.

Mean daily range of temperature, 10.1° F.; greater by 0.2° F.

Mean daily sunshine, 1.31 hours; less by 0.42 hour.

Rain, depth in inches, 6.13; greater by 2.93 inches.

Wind, direction of: a six days' excess of S. and S.W. winds.

November was mild and dull with some severe gales—especially that of the 26th—an excessive rainfall and a lack of sunshine.

Mean temperature was everywhere above the seasonal normal. The excess was small in the extreme north, but amounted to nearly 4° F. in the Clyde area and at Fort William. The warmest days were from the 7th to the 13th, but some relatively high temperatures were also recorded in the south of Scotland on the 29th and 30th. The highest readings reported were 60° F. at Cupar on the 7th, 59° F. at Troon on the 11th and 58° F. at Dunbar on the 7th. There were no very cold days, and at some places in the south and west the screen thermometer did not register a single frost. Even at Dalwhinnie air temperature did not fall below 26° F., which value was registered on the 12th; 26° F. was recorded also at Logie Coldstone on the 29th, while 27° F. occurred at Edinburgh (Liberton) on the 17th, at Balmoral on the 25th and 29th and at Braemar on the 28th and 29th. Ground frosts were registered in one place or other on 24 nights. The lowest readings of thermometers exposed on grass were 19° F. at Aberdeen on the 29th and 20° F. at several east coast towns on various dates between the 24th and 29th.

There was a lack of sunshine in all districts, the deficiency being most marked in the south-west. The largest aggregates were 65 hours at Craibstone, 63 hours at St. Andrews and 60 hours at Forres and Stonehaven. Less than 20 hours' sunshine were registered in some places, Oban and Prestwick each having 18 hours. Fort William and Fort Augustus had aggregates of only 15 and 17 hours respectively, but winter sunshine at these places is somewhat restricted by the surrounding high land.

Rainfall exceeded the normal everywhere except in an area extending south and west of the Moray Firth, where totals were slightly below normal. Some stations in the south-western counties had more than twice the average. Precipitation was remarkable for persistency rather than intensity, many places having rain on every day in the month. Daily falls exceeding an inch were numerous and occurred in all districts, but only a few stations recorded daily falls over two inches. The largest daily measurements, all on the 30th, were 2.44 inches at Ardtornish, 2.13 at Brenchoillie and 2.12 at Inveraray. Other large falls were 2.02 inches at Castle Kennedy on the 7th, 1.99 inches at Auchincastle (Dumfriesshire) and 1.82 inches at Glen Afton on the 8th, 1.80 inches at Kinlochquich on the 13th, 1.90 inches at Glenecore, Arrochar, on the 14th, 2 inches at Kinlochquich on the 18th, 1.78 at Muirshiel and 1.75 at Kaim Dam, both near Lochwinnoch, on the 25th.

Little snow fell during the month but light falls were reported locally on 12 days—mostly in the last week. Hail also occurred locally on 12 days.

Fog was far less persistent than is usual in November. It was fairly widespread in the south of Scotland on the 5th and was reported locally on 18 other days.

Gales were frequent and occurred altogether on 22 days. The westerly gale on the 26th was of unusual severity over the whole of Scotland. Wind attained a mean speed of more than 50 miles per hour at places as far separated as Stornoway and the Bell Rock. Extreme gusts registered at these two stations were 77 and 75 miles per hour respectively.

Thunder was reported at one place or other on 11 days. A storm in Skye on the 6th was accompanied by huge hailstones.

Aurora was observed at some northern stations on the 11th, 12th, 13th, 15th and 17th.

* The averages of normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 90.

Registered in sixteen of the Principal Towns

December, 1939

REPORT

This Monthly Return is notable in that several records for this series of Returns have been registered.

While the marriage-rate is the highest recorded for the month of December in any year since 1920, the birth-rate, the death-rate, the infantile mortality rate and the death-rate from diseases of the respiratory system are all the lowest ever recorded for December.

Births.—In the Sixteen Principal Towns of Scotland, being those burghs which at the date of the 1931 census had populations of over 30,000, there were registered during the month of December 1939 the births (corrected for transfer to place of usual residence) of 3,479 living children, of whom 1,735 were males and 1,744 were females, and of 149 still-born children. Compared with the number in the previous month the living births were 140 more, male births being 6 more and female births 134 more. The monthly birth-rate in these towns taken collectively was 15.9 per thousand. This rate is 0.1 more than that for the previous month but is 1.5 below the five years' average. It is the lowest birth-rate recorded in these Reports for the month of December in any year. The births of still-born children correspond to a rate of 41 per thousand total births registered (including still-born). This rate is 4 below that for the previous month.

In the individual towns the monthly birth-rate ranged from 21.3 in Coatbridge, 19.8 in Kilmarnock and 19.5 in Ayr, to 14.0 in Aberdeen and in Hamilton, 12.9 in Perth and 12.7 in Edinburgh. In Kirkcaldy the rate was 19.3, in Greenock 19.2, in Motherwell and Wishaw 18.4, in Dunfermline 17.4, in Glasgow 16.9, in Falkirk 15.9, in Paisley 15.2, in Clydebank 15.0 and in Dundee 14.9.

Of the 3,479 living children whose births were registered during the month, 3,282 or 94.3 per cent. were legitimate, while 197 or 5.7 per cent. were illegitimate. The legitimate children numbered 136 more than in the previous month and the

NOTE.—The averages used for comparison are the means of the same rates in the corresponding month of the five preceding years.

illegitimate children 4 more. The illegitimate percentage for the month is 0.1 below that for the previous month. In the individual towns it ranged from 12.7 in Dunfermline, 10.3 in Ayr and 6.4 in Glasgow and in Hamilton, to 2.5 in Paisley and in Perth, 1.3 in Kirkcaldy and 1.2 in Coatbridge. In Edinburgh the rate was 5.9.

Marriages.—Marriages registered during the month numbered 2,738 and are 757 more than in the previous month. The marriage-rate, 12.5 per thousand, is 3.1 above that for the previous month and 1.4 above the average. It is the highest December marriage-rate recorded in these Reports since 1920. In the individual towns it ranged from 16.5 in Perth, 14.4 in Greenock and 13.6 in Aberdeen, to 10.1 in Falkirk, 7.9 in Kirkcaldy and 7.5 in Coatbridge. In Glasgow the rate was 12.6 and in Edinburgh 12.4. These marriage numbers have not been corrected in any way for transfer to place of usual residence.

Deaths.—Deaths (corrected for transfer) in the Sixteen Towns during the month numbered 2,882, of which 1,489 were of males and 1,393 were of females. This number is 228 more than in the previous month, males being 80 more and females 148 more.

The monthly death-rate in these towns taken collectively was 13.2 per thousand, being 0.7 above that for the previous month but 2.5 below the average. It is the lowest death-rate recorded for December in this series of Reports. In the towns taken individually the death-rate ranged from 16.4 in Dundee, 14.6 in Perth and 14.3 in Greenock, to 9.5 in Ayr and in Dunfermline and 8.9 in Falkirk. In Kirkcaldy it was 14.2, in Motherwell and Wishaw 14.0, in Glasgow 13.4, in Coatbridge 13.3, in Paisley 13.0, in Kilmarnock 12.8, in Edinburgh 12.7, in Aberdeen 11.9, in Clydebank 10.8 and in Hamilton 10.4.

Deaths of children aged less than one year numbered 279 and equalled an infantile mortality-rate of 71 per thousand of the monthly average number of births registered in these towns during the preceding twelve months. These deaths are 17 more than in the previous month, while the rate is 2 more than in that month but 36 below the average. It is the lowest infantile mortality-rate recorded for December in this series of Reports. In the individual towns this rate ranged from 136 in Kirkcaldy, 129 in Clydebank and 101 in Dundee, to 39 in Falkirk, 36 in Ayr and 32 in Kilmarnock. In Coatbridge it was 100, in Motherwell and Wishaw 93, in Perth 83, in Glasgow 76, in Dunfermline 73, in Greenock 71, in Edinburgh 55, in Aberdeen 51, and in Paisley and in Hamilton 42.

Causes of Death.—Deaths from the principal epidemic diseases numbered 65 and equalled a death-rate of 0.3 per thousand. These deaths are 6 more than in the previous month but the rate is the same. They include 1 from typhoid fever, none from measles, 2 from scarlet fever, 2 from whooping-cough, 37 from diphtheria, 17 from influenza, none from cerebro-spinal fever, and 6 from other epidemic diseases, 4 of which were ascribed to lethargic encephalitis, 1 to dysentery and 1 to erysipelas. Compared with the number in the previous month deaths from typhoid fever are the same, from scarlet fever 1 more, from whooping-cough 1 fewer, from diphtheria 12 more, from influenza 5 more and from other epidemic diseases 4 fewer. In the previous month 7 deaths were registered from cerebro-spinal fever.

Deaths attributed to respiratory diseases, exclusive of those associated with tuberculosis and with influenza, numbered 312 and equalled a death-rate of 1.4 per thousand. Compared with the number in the previous month these deaths are 14 more, while the rate is the same but is 1.8 below the average. It is the lowest rate recorded from this cause for the month of December in any year.

Deaths from all forms of tuberculosis numbered 205, of which 173 were attributed to tuberculosis of the respiratory system. Compared with the number in the previous month deaths from all forms of tuberculosis are 30 more and those from respiratory tuberculosis 30 more. Compared with the average the former are 10 more and the latter 12 more.

METEOROLOGICAL NOTES.
supplied by the Meteorological Office, Edinburgh.
DECEMBER 1939.

Mean barometric pressure, 29.981 ins.; greater than the average* by 0.210 in.
Mean temperature, 38.3° F.; less by 1.5° F.

Mean daily range of temperature, 8.9° F.; greater by 0.2° F.

Mean daily sunshine, 0.69 hour; less by 0.41 hour.

Rain, depth in inches, 1.89; less by 1.96 in.

Wind, direction of: a two days' excess of N.E. winds.

In most parts of Scotland mean temperatures were below normal, the greatest deficiency—about 3° F.—occurring in the south-west. At a few places in the north and north-west mean temperatures reached, or slightly exceeded, the normal. The warmest day was the 1st, when shade temperature rose to 58° F. in Edinburgh, Dunbar, Dunfermline and Ayr. This reading was also attained on the 10th at Oban. The coldest weather occurred on the 19th and from the 29th to 31st. Extreme minima reported were 10° F. at West Linton on the 31st, 11° F. at Wolfelee on the 19th and at Braemar on the 29th, and 12° F. at Kilmarnock on the 29th. Ground frosts were frequent and widespread, being registered on all but the first two days of the month. The lowest readings of thermometers exposed on grass were 5° F. at Auchincruive on the 29th, 6° F. at Braemar on the 29th and at West Linton on the 31st, and 8° F. at Carlisle on the 19th and at Balmoral on the 29th.

At a few scattered stations the sunshine totals reached normal, but over the greater part of Scotland there was a dearth of sunshine. The best aggregates were 37 hours at Eskdalemuir, 36 hours at Dumfries and 33 hours at Auchincruive, Ayr, St. Andrews and Arbroath. Many places in the west had less than 15 hours' sunshine, some low aggregates being 12 hours at Tiree, 11 hours at Paisley, 10 hours at Fort William, 8 hours at Greenock and only 5 hours in Glasgow.

The month was unusually dry for a winter month. A few stations in the extreme north-east had just about their normal rainfall, but everywhere else there was a well marked deficiency. Over the south-eastern counties precipitation was less than half the normal. Daily falls exceeding an inch were numerous in western districts during the first ten days. The largest individual measurements, all on the 9th, were 2.10 inches at Ardnadam, 1.85 inches at Dunoon and 1.76 inches at Forrest Lodge (Dalry). Some other heavy daily falls were 1.48 inches at Polloch on the 1st, 1.22 inches at Islay (Gallabus) on the 2nd, 1.66 inches at Muirshiel (Lochwinnoch) and 1.55 inches at Stewarton on the 3rd, 1.68 inches at Mull (Gruline) on the 13th, 1.40 inches at Arrochar on the 19th and 1.57 inches at Loch More on the 21st.

Snow or sleet showers were widespread during the 4th and 5th and throughout the last week but the falls did not lie to any appreciable depth.

Hail occurred locally on 11 days.

Fog was reported at one place or other on every day except the 2nd and 24th. It was of most frequent occurrence on the east coast and in the Clyde area.

Gales occurred on 14 days. They were most frequent in the extreme north, Lerwick reporting winds of gale force on 10 days. The most severe gales were on the 9th and 13th. On the latter day Stornoway registered gusts up to 65 miles per hour.

No thunder was reported.

Aurora was observed on the 2nd, 5th to 8th, 12th, 28th and 29th. It was seen as far south as Edinburgh and Paisley on the 5th and at St. Abb's Head on the 6th and 7th.

* The averages of normals in the case of pressure and rainfall refer to the period 1881-1915 and in the case of temperature and sunshine to the period 1906-35.

NOTE.—The mean values refer to those of the Principal Towns named in Meteorological Table on p. 98.
